Book Descriptions:

We have made it easy for you to find a PDF Ebooks without any digging. And by having access to our ebooks online or by storing it on your computer, you have convenient answers with 83200 bridge saw manual . To get started finding 83200 bridge saw manual , you are right to find our website which has a comprehensive collection of manuals listed.

Our library is the biggest of these that have literally hundreds of thousands of different products represented.

Book Descriptions:

83200 bridge saw manual

It comes with an 8 in. This saw will also cut porcelain tiles if a porcelain rated blade not included is used. The UL approved, directdrive, 1 HP, 120Volt, brushless motor is powerful enough for quick and repeat cuts, with automatic thermal overload protection to prevent overheating. The six ballbearing cutting assembly allows the motor to glide smoothly with minimal vibration for precise cuts. The completely enclosed dual water spray system evenly distributes water flow, extending the life of the diamond blade. Includes a fold out stand with wheel attachments for easy mobility and storage. For a replacement water pump use 60098 120V Submersible Tile Saw Water Pump. We cant connect to the server for this app or website at this time. There might be too much traffic or a configuration error. Try again later, or contact the app or website owner. Found the manual for you at If this. The manual is 42 pages long but it does have the information you need to readjust this saw. Let me know if you need any more. Go to <http://arrhythmiaclinic.com/userfiles/20200902122731.xml>

To calculate the overall star rating and percentage breakdown by star, we don't use a simple average. Instead, our system considers things like how recent a review is and if the reviewer bought the item on Amazon. It also analyzes reviews to verify trustworthiness. Please try again later. Chris 4.0 out of 5 stars Im not a professional flooring person, but Ive installed a lot of tile for myself and for several years as a handyman contractor. I bought this saw because I have a large area to do, over the next year of remodeling, with 20x20 tiles and needed a bridge saw to manage it well. Ive used tile saws of many sizes, so I knew what these tile needed. If it lasts to the end of this project, Im happy. Renting a saw is ridiculously expensive and anything else would not have really worked well for me for what Im doing. Keep in mind that this saw will likely not last for decades, its simply not built that well, but it

is built well enough to get the job done. I do want to address several of the issues that often come up in other reviews as well as my own experience. There are 4 primary issues that I see in reviews across many sites. <http://daindnc.com/fckeditor/userfiles/california-personnel-administration-manual.xml>

I was able to make small adjustments to the bridge mounting to get it back square without much trouble. Given the way its manufactured, that is not a large amount to be off. I was expecting this based on my research, so I spent the 5 minutes making it square vs. Ive seen this more times than I can count, and it will play havoc with you. One cut is perfect, the next is off by a bunch, its not the saw, its the tile when this happens, or you really suck at cutting tile. Do yourself a favor, buy good tile, or use really large grout lines to hide it. This was one where I took the advice of the reviewers and purchased a high quality blade at the same time. A good blade does cut a lot better than the supplied blade, but the supplied blade is decent enough. I am cutting industrial grade porcelain tile, so I was not going to chance anything but a high end blade. I would recommend testing it out and making the call based on the results with your tile. Well, yeah, they are to be blunt. They attach with a clamp mechanism that is far too weak to hold them on. My recommendation is to drill and bolt them on, which is what I did and they stay put now. I personally did not experience this. The blade runs true and cuts straight as measured against the bridge. There are washers that have to be installed with the blade, it is possible some missed those or they were not included. Other issues I encountered The water pan is kinda crap. Its not a heavy enough plastic and is difficult to carry when full to dump out when cleaning up. As I usually have the saw setup outside, this is not an issue. I just tip it over some and dump half the water out before removing it. This was mainly due to the way it was boxed and the lines are stuck in that position due to material memory. I have worked most of that out, I may make something to keep it from falling back behind the bridge at some point if needed. I actually saw some complaining about the saw being messy. Really Its a WET SAW!

Of course its messy. I find it is far less messy than a table top saw since the blade is overhead. Not really an issue, but this thing is big and heavy. But, that would mean it would cost more, so, meh. Keep in mind that this is not exactly portable due to that, and it will take up a fair bit of room in your garage. After making the necessary adjustments and installing a good blade, it cuts very well. The motor has plenty of power to cut the ultra hard porcelain tile I have, and rather quickly too. Cuts are clean and have not had an issue with the saw vibration breaking on thin cuts all saws vibrate, this one is a little worse than others, but fine for my purposes. So, should you buy this saw, well, that depends. If you are willing to fiddle with it a little, possibly have to get some replacement parts from QEP I did not have this issue, but being a lowend saw, that is quite possible and put up with a few minor nuances, then yes. Im quite serious about that, this is a good saw for someone on a budget, that does not need to use the saw every day or long term and that can fix the minor issues it has. Its not for a professional or someone that does not own a screwdriver you probably should not be laying tile if thats the case anyway..Im a keen DIYer and have so far used this on multiple bathrooms including a complete floor to ceiling spa type bathroom that needed angled cuts. Definitely invest in the Black Widow saw recommended for this product it cuts through tiles like a knife through hot butter. The laser might seem like a bit of a gimmick but is actually really useful. Take the time to set it up and mark with a bit of nail polish or paint where the laser falls at both ends. You can then calibrate it before you start cutting each time and get really accurate cuts. I read many of the other reviews and have to agree, this saw is a real workhorse. I set it up outside under a covered patio and at the end of each day use my garden hose to clean it up.

<http://www.drupalitalia.org/node/78805>

The casters have the problem mentioned in the other reviews, but that is incidental. I did not buy a saw based on how it moves around, I want it to CUT TILE. I switched to the blade back to the blade that came with it for the ceramic, that worked just fine. It does a great job on the travertine as well.

I like how the bridge tilts also, as I usually do a back cut on a finished edge for my outside corners. The fence is a little rough to slide once it gets some grit in the rail, but it cleans out easy enough. The only thing I would change is to make the fence reversible. I would recommend this saw to anyone who need to handle large tiles or a lot of cutting. It is a BEAST! Updates to my comments after using this saw continuously for a year. Pump is still working, no problems. Blade exchanged 4x, easy replacement. Hotdog blade is great. Platform vibration is evident as noted by other users. Tray and frame, all the welds are still intact, the wire tray got bent from overloading. Casters, fixed them using double hex nuts vs. Still happy with my choice. A new bathroom remodel required more than the little plastic saw had to give. It came quickly and, luckily considering the awful packaging, was undamaged. Setup was straightforward and the saw has a usable blade for ceramic tile. The cuts are straight and they go quickly. The one issue I had was that the water reservoir leaked like a sieve. It was more than a drip and it's a good thing I had a five gallon bucket handy to catch the resulting flow. If you can put up with the sort of issues that come along with something made with limited quality control I got lucky compared to what others have gone through, so YMMV, the value this saw represents is exceptional as the price gap between it and better saws is quite large. In my case, I bought it specifically to do this job and even if I never use it again, it was worth what it saved me in time and effort. Were I a professional, I would opt for a better quality tool.

<http://apartmangyula.com/images/bowens-esprit-gemini-gm500-manual.pdf>

We returned the saw after one afternoon of attempting to get it to work for us. VERY frustrating! The issue was that the bolt that secures the motor for transportation was not secured so the weight of the heavy motor broke brackets and twisted the end plates. If I wasn't in such a need for the saw I would have returned it. The saw functions well overall and would like to give it a higher rating but QEP should do a better job in securing the motor and the angle bracket that attaches the motor to the chassis is thin and weak. Sorry, we failed to record your vote. Please try again. Sorry, we failed to record your vote. Please try again. Save your money and purchase a better quality product. Doesn't cut straight!!!!!! Sorry, we failed to record your vote. Please try again. Sorry, we failed to record your vote. Please try again. Get a new one right away. Get a new one right away. The saw works nice once it's set up but it's real clunky to move around. Sorry, we failed to record your vote. Please try again. Sorry, we failed to record your vote. Please try again. Every feature on this saw is innovative and the definition of quality for a pro tile saw. The Deep Well Wave Wall will extend the life of your pump and the removable water nozzles maximize water efficiency to the blade while cutting. This equals better cutting for a longer time than competitor saws. We'd love to hear from you.
