It needs to be uncompressed, or Unzipped. Need guidance with this post back in a Comment. Regards, joecoolvetteMe I click on US. A small window will come up on the right. Opening M7223v1.0.zip Make sure the small circle to the left of Save File, has a green dot in it.http://www.conex-trade.com/userfiles/enco-92010-lathe-manual.xml

If not leftclick on the empty small circle to the left of Save File. Now go below in the small window, and leftclick on OK. A small window will come up on the left. IN the top of this window tells you where the file will download to. Suggest you write it down. The wording may have Desktop, or My Documents, or Downloads, in it. This is for Win XP. IF you have Vista, or Win 7 it is different. Post in a Comment if so Desktop The file M7223v1.0.zip name will be on your desktop screen, and next to a yellow folder icon, with a zipper on it. My Documents Click on Start, then on My Documents Downloads Click on Start, then My Documents. DOUBLEclick on Downloads. When you see the file name DOUBLEclick on it. The next scenario differs; You may have a screen that has Unzip on the right side. If so leftclick on Unzip. You may just have a screen where you go to the far left side, and leftclick on Extract all files. Leftclick on Extract all files. In the next three small windows that come up; Click on Next, Next, and Finish. You will now see a red Adobe PDF icon, and M7223v1.0 next to it. DOUBLEclick right on it. You are now looking at a PDF file version, of the motherboard manual, for an MSI 915GVM3V motherboard. I wanted you to have the motherboard manual for the future. Now, Jumper J1 not connected; Nope, dont see it. Would this be a reference to jumper JFP1. The area of contact pins on the motherboard, that the wires from the Front Panel go to, is the Front Panel header. JFP1 is to the right of the BIOS chipset. Which is below the SATA 2 port, and the CMOS battery JFP1 is where the; 1 Power On switch connects 2 Power On LED light connects. MAY connect to JFP2. Read on 3 Reset switch connects. IF, a Reset switch is used. No Reset button No Reset switch 4 HarDDrive activity LED light connects. Looking at the motherboard installed in the computer; Processor to the top, Ram Memory to the right, white PCI slots 3 at the bottom.

The JFP1 header is at the right bottom edge of the motherboard, to the right of the BIOS chipset, and is situated Vertically. Has two columns of contact pins. Starting at the BOTTOM Right side, going UP; Pins 1, 3, 5, 7, and 9. Starting at the BOTTOM Left side, going UP; Pins 2, 4, 6, and 8. There is NO Pin 10, just a blank spot. A Pins 1 and 3 are for the HarDDrive activity LED light. IF the HDD activity LED is dim, when the harddrive is operating, switch the wires around. B Pins 5 and 7 are for the Reset switch. IF, a Reset switch is used. D Pins 2 and 4 are for the Power On LED light. If the LED is dim when the computer is on, switch the wires around. E Pins 6 and 8 are for the Power On switch. A note about the Power On LED light, and wires. For a Power On LED light that has TWO wires, use JFP1. If it has THREE wires, use JFP2. In the older computers it usually was Green, and Yellow. Yellow meant you were in Normal mode, and Green meant Turbo mode. When in turbo mode, the computer was operating at its fullest. In the other mode, it was being slowed down, below the normal output of the computer. For additional questions please post in a Comment. Regards, joecoolvetteMake sure that you have cleaned the surface of the heatsink that touches the cpu off its thermal grease before putting it back. Some manufacturers license their brand names to other producers. Product name is a key part of the Icecat product title on a product datasheet. Multiple product codes can be mapped to one mother product datasheet if the specifications are identical. We map away wrong codes or sometimes logistic variants. Often it has some integrated components like a sound card, enabling your computer to play sound, or a network card, to connect your computer to the network. The standard form factor size for motherboards is ATX, you need at least a miditower to fit one of those in. MicroATX motherboards are often more complete and have more onboard devices, like a video board and fit in smaller cases, but are generally less expandable.

It may not display this or other websites correctly. You should upgrade or use an alternative browser. So far I havent even figured out how to remove the stock motherboard. Could someone show me how to go about doing this, as I have little experience regarding computer hardware Thanks In my experience, the processors and peripherals hard drives, optical drives, PCI cards, memory, etc. are pretty standard, but Dell cases, motherboards, and power supplies tend to be proprietary designs. Its usually not easy to swap in new parts from other vendors, or even from other Dell product lines. I consider myself fairly competent have changed motherboards and power supplies countless times, and recently started changing components like capacitors on the boards themselves, and its not a project I would bother with. If you do decide to tackle this, the Dell support website support.dell.com does have pretty good service documentation. This is the link to the information about removing the motherboard Basically, you open the case, pull up on the green tab, and slide the motherboard forward. Note that the graphic shows a screw near the tab I think you have to remove that screw, although the manual doesnt appear to mention it. Like I said, I dont have a 4500 but in the Dimension desktops we have, the tray has metal tabs that stick up through metal clips on the motherboard. Your new keyboard, USB, etc.Good luck!
