Kickspace Heater
CKHA/RKHA Series

Dimplex
Better solutions through innovation

IMPORTANT INSTRUCTIONS

When using electrical appliances, basic precautions should always be followed to reduce the risk of fire, electric shock, and injury to persons, including the following:

1. Read all instructions before using the heater.
2. The heater is hot when in use. To avoid burns, do not let bare skin touch hot surfaces. The trim around the heater outlet becomes hot during heater operation. Keep combustible materials, such as furniture, pillows, bedding, papers, clothes, and curtains at least 3 ft (0.9 m) from the front of the unit and keep them away from the sides and rear.
3. Extreme caution is necessary when any heater is used by or near children or invalids and whenever the unit is left operating and unattended.
4. Do not operate any heater after it malfunctions. Disconnect power at the service panel and have the heater inspected by a reputable electrician before reusing.
5. Do not use outdoors.
6. To disconnect the unit, turn the controls off, and then switch off at main power supply panel.
7. Do not insert or allow foreign objects to enter any ventilation or exhaust opening as this may cause an electric shock or fire, or damage to the heater.
8. To prevent a possible fire, do not block air intake or exhaust in any manner.
9. All electrical heaters have hot and arcing or sparking parts inside. Do not use in areas where gasoline, paint, or flammable liquids are used or stored.
10. Do not modify this heater. Use it only as described in this manual. Any other use not recommended by the manufacturer may cause fire, electric shock or injury to persons.

SAVE THESE INSTRUCTIONS

Installation Instructions

WARNING: To reduce the risk of fire, do not store or use gasoline or other flammable vapors or liquids in the vicinity of the heater.

CAUTION: High temperature, risk of fire, keep electrical cords, drapery, furnishings, and other combustibles at least 3 feet (0.9 m) from the front of the heater.

NOTE: It is extremely important to read all information labels. Care must be taken to ensure that the heater is rated the same voltage as the electrical supply wires. Failure to do so could result in unsafe heater operation as well as damage to the unit. If replacing an existing heater, check the labels of the old heater to ensure the voltage of the new heater is compatible.

NOTE: Care must be taken to prevent undue strain on all wiring or heating element assembly, when removing and

re-assembling heating element assembly.

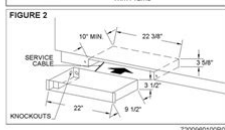

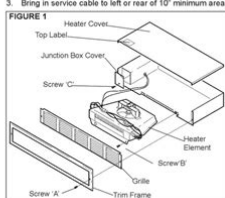

CAUTION: For field rewiring to 120V all leads must be secured under wire clamps.

NOTE: Air and grille temperatures conform to CSA & UL regulations but may discolour certain materials, particularly those materials incorporating clear vinyl. Materials should be checked prior to installation to determine if discolouration or distortion would occur in the vicinity of 60° C (140° F).

Kickspace Installation

NOTE: Unit should be installed so that it is not directly under sink or other frequently used work area as air temperature may be uncomfortably warm. Also, if carpeting is on floor, mount unit so bottom of grille is level or above the top of the carpet pile.

1. Measure area of intended use. If there is not sufficient room for the grille frame, the frame may be removed by removing grille frame from heater (screw "A"), remove frame and re-install grille.
2. Cut 22 3/8" x 3 5/8" opening (Figure 2). Keep clearance area free of obstructions.
3. Bring in service cable to left or rear of 10" minimum area

You may need to take it to a local repairer to see if they can dry out the element. If there is moisture in the element it is not safe to use, hence it trips your circuit breaker.How do I reprogram it to start working again Heater still works on both settings, but no flame effect. Tried new bulbs, but still no flame effects, any ideas Answer questions, earn points and help others. When on the fan and heater seem to kick in even if its outside of the time of the timer Like Share More 1 answer GLEN D. Dimplex 2 months ago Hello GRT When on a timer setting the heat would need to be on. Please make sure that the auto function is displayed on the timer. Please call us on 1300 556 816 if you need further assistance Like Report Heather F. asked 3 months ago OFC2400TIF My heater has been seldom used but now whenI plug it in nothing happens no lights come on and no heat comes out.Like Share More 4 answers Angela C. Dimplex 3 months ago Hi Heather F. You need to charge the batteries in the timer so that your heater works. Please follow instructions below. Timer Memory Back Up Batteries Once the heater has been left plugged in with the socket switched on for at least 72 hours the timer's memory back up batteries will be fully charged. Use a multimeter to check how far the AC Voltage is getting through the circuit without killing yourself.Im cold now! haha. On my model there are three terminals on the timer device with a nice little wiring symbol diagram showing how the 3 pole switch works. Like Report View 1 more answer Alison asked 4 months ago OFC2400TIF The fan on my dimplex heater is blowing cold air when the heater is on high, not sure how to correct it.Please have the heater off and the heater plugged into a powerpoint that is switched on and do not touch the heater for 72 hours. Once you have done this and if you are still

experiencing issues please call our Customer Care team on 1300 556 816 to try and trouble shoot over the phone. <http://datatech-int.com/userfiles/cadillac-escalade-ext-2007-manual.xml>

Like Report Jack 3 months ago This is an incredibly bad design for a seasonal product. Does Dimplex realize this. I pulled mine out of the cupboard today after not needing one for years. I simply rewired the timer out of the circuit. I would like to know how I can get my money back on this completely useless product. Obviously it is now out of warranty. I thought I would start using this product to save on heating the whole house with ducted heating but it will not work. The money I paid for it should be reimbursed by Dimplex as this is obviously a faulty product. Please let me know what can be done about this before I go to consumer affairs. Please advise as soon as possible. Use a multimeter to check how far the AC Voltage is getting through the circuit without killing yourself. I'm cold now! haha. On my model there are three terminals on the timer device with a nice little wiring symbol diagram showing how the 3 pole switch works. In my case it was as easy as wiring all three terminals together. Like Report Sharon asked 8 months ago OFC2400TI I have a dimplex quantum electric economy storage heater qm100. I had a power cut and it is not working now, even the economy light is not working either. Like Share More 1 answer Eleonore E. Dimplex 8 months ago Hi Sharon, I apologise for the delay in the response, I have had out tech view your email, and he believes that there is no simple solution for the problem you have described. There is a possibility that it could be the PCB bored or something electrical. The Tech that is coming out should be able to diagnose it more accurately. Neon light on. Manual on. Unit does not heat and fan does not work. Like Share More 4 answers Angela C. Dimplex 8 months ago Good morning Joe, When your heater has been in storage for awhile the timer batteries need to be charged for your heater to work. Please refer to below.

Timer Memory Back Up Batteries Once the heater has been left plugged in with the socket switched on for at least 72 hours the timer's memory back up batteries will be fully charged. In the event of a power cut or disconnection from the mains, the timer will continue to function and all programmed settings will be retained for up to six months providing the timer batteries are fully charged. If you require further assistance please don't hesitate to contact the Customer Care team on 1300 556 816. Like Report Joe 8 months ago Unit has not been used for around 10 days and do not use the timer function or programmed settings. Like Report Angela C. Dimplex 8 months ago Have you tried recharging the batteries for a full 72 hours before use. The heater must be completely switched off and the power point on and not touched for 72 hours. The heater will not work properly without being fully charged. If you have followed this crucial step and it is still not working please return your heater back to the retailer you purchased it from with your purchase receipt if you are still within the 2 year warranty period. Prior to this the heater was working in AUTO mode I just want to change the time to daylight saving time. Like Share More 2 answers GLEN D. Dimplex 12 months ago Hello Chelle. Thank you for your contacting us. The first thing that you would need to do is make sure that the unit is in manual mode, then you should be able to reset the time. If you are still have a concern, please contact us on 1300 556 816, we will be happy to assist you. Like Report Chelle 12 months ago Thanks Glen. Got it sorted. Perhaps the instruction manual should state that you have to PRESS and HOLD the program button for the clock symbol to appear. Once I figured that out I was able to reset the clock. Just for info, I found the instruction manual to be quite hard to follow, particularly with regard to AUTO programming. Thanks again for your response Glen.

<https://www.informaquiz.it/petrgenesis1604790/status/flotaganis21052022-0554>

Why would the heater stop working purely because I moved it from one room to the other. Use a multimeter to check how far the AC Voltage is getting through the circuit without killing yourself. I'm cold now! haha. On my model there are three terminals on the timer device with a nice little wiring symbol diagram showing how the 3 pole switch works. How do I get it working again please. Like Share More 2 answers GLEN D. Dimplex 1 year ago Hi Shayenne, Key Lock To lock the keypad press

ENTER and MODE simultaneously. The key symbol will appear on the screen when the keypad is locked. To unlock the keypad repeat the action above. Like Report Shaynne 1 year ago Thanks Glen D,I did manage to do that this morning. How do I get it to work from there on please. It is very complicated. How do I turn it on. It is not working. Like Share More 5 answers dogsforus 1 year ago Hi Marion, unfortunately like mine, it wont work because the battery controlling the electronics is flat. Dimplex state it needs to be switched on for 72 hours to charge.but I left mine on for over 4 days and it still does not work. Obviously the battery has failed. This is happening to a lot of buyers and Dimplex dont want to accept responsibility. I only used mine once and put it away for a few years because I had a wood heater. Absolutely ridiculous that a heater, at best, needs to be charged for 72 hours when you need to keep warm,, but then to find even after that prolonged process, the battery is dead. Dimplex you are a disgrace. Like Report AJL. 1 year ago Same experience here design fail in the extreme and as it turns out, money down the drain. Like Report GLEN D. Dimplex 1 year ago Hi Marion, Please charge the timer memory back up batteries. Plug the heater into the power point and switch it on at the socket. Please make sure that the actual heater is off.

<http://familymn.com/images/Dialysis-Technology-A-Manual-For-Dialysis-Technicians.pdf>

Once the heater has been left plugged in with the wall socked on for at least 72 hours the timers memory back up batteries will be fully charged and the heater will be fully operational. This procedure will need to be followed when you take your heater out of storage when it hasnt been used for many weeks or months. Like Report View 2 more answers kate asked 1 year ago OFC2400TIF hi my Oil heater Dimplex OFC1200 T1 stopped working.I set it on manual use and Auto but doesnt heat.Like Share More 4 answers GLEN D. Dimplex 1 year ago Hello Kate If the heater has not been in use for some time, you may find that the cause of the issue, rather than being a faulty unit, may just be a flat resistor. This will ensure that the resistor is charged to capacity and should enable the unit to produce heat. Should you find that even after allowing time to charge the unit is still not functional assuming that the digital display shows that the unit is set to MANUAL mode, if your product is still within the manufacturer's warranty period, please return your unit to your place of purchase along with your proof of purchase to receive a replacement of the current equivalent. Should you heater be out of the warranty period, you may wish to contact a local small electrical goods repairer to discuss whether it is more economically viable to repair or replace the heater. Like Report dogsforus 1 year ago This product is a complete dud. Use a multimeter to check how far the AC Voltage is getting through the circuit without killing yourself.Im cold now! haha. On my model there are three terminals on the timer device with a nice little wiring symbol diagram showing how the 3 pole switch works. We would like to have a chat regarding this, please call us on 1300 556 816. You could also try the following. If the heater has not been in use for some time, you may find that the cause of the issue may just be a flat resistor.

<http://gulzarihacegandergisi.com/images/Dialysis-Machine-User-Manual.pdf>

This will ensure that the resistor is charged to capacity and should enable the unit to produce heat. On my model there are three terminals on the timer device with a nice little wiring symbol diagram showing how the 3 pole switch works. The local council will accept the heater at the tip if I empty the oil. How do I do that Like Share More 1 answer Danielle D. Dimplex 2 years ago Hi there Mellare Thank you for your query. Please note that these heaters are considered a sealed system which means that each fin is separate to the rest of the heater.

To empty, you will be required to carefully drill a hole into the base of each of these fins, and drain the mineral oil contained inside into a suitable container prior to disposal of the heater itself. The team at Dimplex Australia Like Report Jmil asked 2 years ago OFC2400TIF Mine stopped heating altogether. It was unplugged for one week. Ive had it switched on for 10 hours and the thermostat on high. The fins arent even heating up and the only light that is on is the timer power light. Any ideas Like Share More 3 answers GLEN D. Dimplex 2 years ago Hello Jmil. If the heater has not been in use for some time, you may find that the cause of the issue, rather than being a faulty unit, may just be a flat resistor.
