Which is better. You need to get the right accessories and make the right tweaks to enjoy your new TV to its full potential. In this guide, we'll go through everything you need to set up your 4K TV — from HDMI cables to picture settings — just the way you want it. If you're wall mounting your TV, a cable and power management kit is a great way to make that install look clean. It helps you route your cables and power from near the floor, up through the wall to where your TV is mounted.

Whether it is a stray pillow hitting the TV or, worse, an earthquake, having a security strap is good protection against unknowns. These not only let you plug everything into one place, but will also protect your electronics from electrical spikes and surges. Do you already have a cable box, antenna, gaming console, Blu-ray or UltraHD Blu-ray player. What about a streaming box or stick. You'll want to gather up all the sources you plan on connecting to the TV and see what types of cables they require. This way you only have to make one trip to the store for supplies. They provide the highest quality picture and sound. For 4K Ultra HD sources like an Ultra HD Blu-ray player or a 4K streaming settop box, make sure you have HDMI cables rated to handle 4K bandwidth. The packaging, the cable itself, or the product description will typically tell you if the HDMI cable is "fast" enough. Do not spend too much on HDMI cables, though. Older components like a Nintendo Wii will use analog RCA cables, so keep that in mind when you're figuring out which cables you will need.

No matter what you choose, it will upgrade the sound of your TV. Movies will be more fun to watch, and the dialogue will be much clearer and easier to hear. Remember, when connecting any speakers, use HDMI cables if the speaker system is compatible. If not, an optical cable will still deliver quality sound. There are many guides — including our own — available to help you achieve the best picture quality, but these essential changes will help you enjoy your TV right away. For the most accurate picture select the Movie or Cinema preset. Some TVs have separate options for bright and dark rooms. Adjusting the backlight and brightness settings will also make the picture brighter. The Vivid and Sports modes are usually very bright, but the colors aren't very accurate and the intense picture can wear on you in time. If you want the right balance between vividness and accuracy, the standard setting is the way to go. If you don't, you'll see image processing that makes the shows and movies you watch look like a soap opera. This is the number one complaint new TV buyers have and it is an easy fix. Making a list and gathering everything together will streamline your installation process once you have started. Having a friend around is always a great idea too, especially for unboxing and placing or wall mounting the TV. Enter Disney, a somewhat surprising and welcome new player on the calibration stage. WOW World of Wonder not only sets the bar for calibration suites available in high definition, it provides an as yet unrivaled home video education on the nuances of properly calibrated audio and video gear, offers an extensive collection of smartly conceived tests and tools, and delivers it all via a helpful, userfriendly experience designed with a variety of users in mind. Blu-ray Forum All home theaters should have a disc like this. WOW is a

tutorial disc that helps you to set up your HD system to its maximum potential. It helps you calibrate the sound and the picture, and does so with easy stepbystep guides. Best Bluray Movies, Yahoo News Kudos to Disney, Using a combination of the beginner and advanced calibration tools, I dialed in the Samsung TV to some accurate, eyepopping levels, Disneys WOW disc is great for installers and home theater enthusiasts. FlyEaglesFly. 5.0 out of 5 stars The DVD is exactly the same as the BluRay for calibrating your TV.

The only difference I can find are the Disney movie samples at the end, DVD quality vs 1080p full HD. The calibration part, which is why I assume you are buying this, is exactly the same between the DVD and BluRay versions. I bought the BluRay and calibrated both of my TVs and sold it on EBay because of the ridiculous price people are willing to pay for it. I actually more than doubled my money of what I paid for it. Fast forward a year, I bought a new TV Sony XBRZ9D, an amazing TV by the way and wanted to check my calibrations against the WOW disk to see if I could get it any better. I've had both versions now, if you don't care about the short mini Disney movies, the DVD is identical to the BluRay. You don't need to see these test patterns in 1080p BluRay format, and even if you did, which again, you don't most likely your TV is upscaling the DVD to a little closer BluRay quality anyway. You should understand the Limits of ALL calibration discs prior to purchase Despite an unfortunate title the Disney WOW is the best of the lot if you are not using instruments. The title implies a kids video with cartoon characters. Just the opposite is true. This is a serious calibration disc with excellent tutorials, an excellent manual and is the easiest disc, of the lot, to use. There are NO cartoon characters in evidence this is a serious calibration disc created by a major studio. However, keep in mind, youll ONLY be able to adjust 3 parameters on your high definition TV reliably BY EYE NO MATTER WHAT DISC YOU USE. But these are important parameters. Youll be able to adjust your black level, white level and sharpness setting. That means your blacks will be as black as possible yet youll still be able to see dark grays. Your whites will be as bright as possible but youll still see shades of white just below peak.

Finally you can adjust your sharpness setting for full detail but without any edge enhancement a white outline around objects to create the false impression of sharpness. All four of these discs do that but the WOW disc is easier to use and easier to get the best results by eye. Otherwise the WOW is superior and has the easiest to use test patterns for the key parameters that you can set by eye. In fact, the WOW disc actually has the better patterns with finer granularity than the other discs. An unfortunate title for a superior disc. Update August 2013 Spears and Munsil has just released their second editon test disc which is superb yet the Disney WoW still remains my favorite for setting up the basics Though I have calibrated my own and friends home theaters for years, and consider myself fairly advanced at the task, this disc works great for me. And to its credit, it is presented in a manner that lets you choose whether to let Goofy explain the basics and walk you through the process — or to skip to intermediate or advanced sections without wasting your time and pride listening to Goofy. And its more than just a Bluray DVD. It includes a bluefilter viewer for performing chroma setup, as well as a 53page illustrated manual for reference. Id say that WOW World of Wonder is unquestionably just the thing for 98% of all people wishing to optimize a home theater. Only professional technicians and reviewers who write for Videophile magazines who could never admit they used a Disney disc for calibration need to spend way more moohla for the highend calibration alternatives. Even though I had some free calibration discs already, I figured I would give this a try. Turned out this was the worst of all of them. For example, using the included blue filter, after adjusting Tint and Saturation per instructions, I was left with an extremely bright, oversaturated mess. After reloading one of my projectors presets I made subtle adjustments until I had everything dialed back in.

Really disappointed. One star because if you're a complete novice, some of these tools might improve picture quality but quite a disappointment overall. I had used the THX Optimizer before and I def. My Band of Brothers Blu Ray set is the most improved of all, from what my eyes can tell. I have friends and relatives who can sit down and watch pixelated garbage on their 70 inch TVs without a fuss. I couldn't for the life of me get the white balance correct on my setup, because I was using a PS3 for the Blu Ray player and there was an option in there that needed to first be changed after I figured that out, everything worked great. Instructions are clear and precise and providing you follow the instructions to the T, you will get fantastic results. The disc covers basic, intermediate and advanced options and some things require specialist equipment such as a sound pressure measuring device for the speakers. For sorting out my surround sound speakers I just downloaded a decibel measuring app and held it in front of my face, I then slowly went through all the tests to ensure that all my speakers were exactly the same volume from my seating position. Some of the most useful test cards that you get on the bluray allow you to perfectly set up the colour and hue of the tv with the use of a blue transparent piece of plastic in the centre of some card that comes with the bluray. It's hard to explain but by looking at Red, Green, Yellow, Blue, Cyan and Magenta through a piece of blue plastic you will see everything on your screen in grey. You simply have to ensure that the top and bottom vertical strips on the screen match colours as best as possible. There are two strips for sorting out the strength of the colour and two for sorting out the hue how green or how red the picture should be. The bluray also has an option that allows you see any distortion on the screen or varying colours due to not sitting directly in front of the tv.

It displays a pure magenta colour on screen and if there is any kind of discoloration it means you need to rotate the screen slightly towards your view. To help set up true colours there are sections with mountain scenes, an ocean with a coast, a photo with a woman holding different coloured peppers and a photo of a fruit and vegetable market stall. There are many HD demos on the disc that you can enjoy watching after you have done all the fine tuning and calibrating. Toy Story looked absolutely phenomenal after I spent the best part of 3 hours doing all the calibration tests provided. The first time through the basic setup it will take about an hour as you will be learning how to use it and get the most out of the disk, after that you can do a TV in about 15 minutes. I would recommend having one of these in your collection just to get the full potential out of the expensive TV screen you have just brought. I had set the TVs up to what I thought was close to the cinema settings but this made me think how far out I was. The TV is now able to show the pin stripes on suits where as before I thought it was just black. Little changes make a big difference. On a side note the player you use to set the TV up should be able to show the full dynamic range. Unless you want to be buying light meters and such this will give you a pretty good picture quality and explains a lot of the theory behind it. Has a good set of clips of Disney movies so you can test your picture out and hear your surround sound in full glory. Admittedly some of the features are pretty useless to the layman, especially all the sound frequency stuff, but all in all a good package. The pixel shifter is another reason I bought this and is a good idea for anyone who owns a plasma tv. It can solve your image retention problems and worked for me! It still took probably a good hour to use if only to confirm certain limitations of a new Sony TV.

No doubt I will use it again in a couple of months time once the TV has been used for a few hundred hours. Excellent value for money and worth the wait from the USA! I am somewhere in the middle so spent a fair amount of time doing this but it makes a great difference to the TV.

It seems that the picture is too wide and I can't find anywhere to adjust the screen. I've tried the menu section and have tried to find an online manual to no avail. Anyone else own this TV or can point me in the right direction. Both boxed up, I should break them out again. There is no quick screen size adjustment via the remote, but might have a hidden service menu. There might be horizontal and vertical size potentiometer adjustments inside the back cover, but have care. High voltage at the Flyback Transformer even when unplugged! Glad to have you back on board. Second, I'm totally jealous of the Ninja Turtles TV sets. Third, that TV was sold in many kids themes including Mickey Mouse, Disney Princess, and Spongebob. Fourth, here's the manual for similar models. [sb315.html](#) I hope that helps you. Glad to have you back on board. Fourth, here's the manual for similar models I hope that helps you. Nice find on the manual. I downloaded the PDF myself, thanks.

Looking at the pictures confirms a same design, the last page states made by Emerson. To adjust the horizontal will require access to the hidden Service menu, the codes would not be listed in any user manual though. The Emerson SB315 Service Manual Sponge Bob or Emerson P3815NT Service Manual Ninja Turtle lists the access codes of the hidden on screen Service Menu. The link below has a two part RAR file for the regular CRT EWC0902 Emerson TV Owners Manual, Service Manuals for the CRT and newer LCD. Strange, the manual calls for an access hole in the remote to unlock the Menu. Be sure to have good batteries on the remote before coding in the sequence and write down the number for each code before changing. Have care you could brick your TV on some of the codes, just go after the screen size adjustment codes. Also, avoid using the headphone jack. Amazon customer reviews show the Sponge Bob TV audio gives out, likely caused by that headphone jack that switches the audio output circuit. The mini phono jack is fragile and issue on ANY TV; the plug automatically cuts off the internal speakers for headphones or sound bar and eventually fails. Does not take much bending the internals of the tiny jack if the plug is inserted at a slight angle. Have care you could brick your TV on some of the codes, just go after the screen size adjustment codes. No luck. When I try to access the hidden service mode by pressing vol on the set and 9 on the remote it does not work. I also tried to access any of the other modes to no avail.
