In addition to a significant increase in strength and durability, Dynatrac FreeSpin kits improve fuel economy by reducing the components that spin in the front axle when 4wheeldrive is not selected, and the kit provides the flexibility and robust design of manual locking hubs. Watch this video to learn why the Dynatrac FreeSpin is the best hubconversion kit for your truck When Dynatrac DynaLoc hubs are used, the FreeSpin Kits offer the shortest hub stickout length on the market, keeping them tucked inside the wheel and tire package better than competitors. Request a Call Replacements are available worldwide. The shafts, depending on model 1040, 4140, 4340 are made in America. See the following videosMost hub assemblies are one piece, simply slide it on and bolt it down. They are unique in design and function. There is nothing on the planet that is like this kit that uses offtheshelf modified factory OEM components. Why Thats the million dollar unanswered question. Its like towing an anchor all the time! Its easier to stop a free spinning wheel by itself than the entire front axle drive assembly when its engaged. This kit uses factory specific parts, which are all improved OEM components. They have been completely throughhardened like high performance axle shafts. All parts may be purchased individually. Stub shafts and gears are heat treated to assure strength and durability.http://XN--90ACFOKXBBABOF0H.XN--P1AI/files/casio_3054_watch_man.xml

Product quality is the foundation we stand on; we build our hub kits with a relentless focus on safety, durability and craftsmanship. Watch our videos on how to easily perform lubrication maintenance of your Manual Locking Hubs The recommended maintenance schedule for all manual locking hubs is every 24,000 Miles or less. Ultimately, our manual locking hubs can possibly last the life of your vehicle with regular maintenance. NOTE Failure to properly maintain your bearings can result in the premature wear of your unit bearing locking hubs. Simply put, all bearings can fail from neglect or lack of applying grease at regular intervals. The design of our locking hubs has simplified the maintenance process by using the ABS access port for greasing your hub, making it straightforward and effortless. Excessive use or abuse can void your warranty. Example Leaving your hubs engaged for long periods, driving on dry pavement while hubs are engaged, etc. All warranty claims must include a Return Merchandise Authorization RMA number, which you can request by contacting Support at 8174290105. While the factory unit bearing is non-serviceable and prone to failure, the FreeSpin hub conversion offers ease of maintenance, a much smoother ride, better steering control, greater fuel economy, and longer axle and driveshaft life. Advantages that add up to tremendous cost savings over the life of your vehicle. That means towing, downtime, expensive dealer repairs and a ruined vacation or lost revenue for a work truck. Improved fuel economy and smoother performance is an additional bonus. The issue is the wheels are closed and do not have a removable center cap, which is required to allow the hub snout to pass through. You must have a wheel with a center hole or removable cap. Most aftermarket wheels have a removable center cap. At this time, Dynatrac does not produce the component to make their kit compatible with dually models, so please contact Arrowcraft for this piece. Best bearings you can buy, the races were preinstalled, the machine work is great. The installation instructions are top notch and lastly the Dynatrac hubs are the strongest hubs on the market. Easy to use, fairly easy install, truck handles better and I can break the rear tires loose quicker. Couldn't be happier with my Dynatrac Free Spin Kit. Went right on my Ram 3500. I immediately noticed an improvement in the truck's handling. Agreed, besides other benefits, the truck will typically steer noticeably smoother with a Free Spin Kit installed. Added strength and dependability along with better MPG's. What's not to like? Also would you recommend disengaging after every use or will they be OK to run locked all winter. Something other than AEV or BMF requires a wheel with a full size center hole or removable cap. We have also run Method and KMC. Which is pretty common for aftermarket wheels. The ABS tone ring will come preinstalled. Please refresh this page and try again. All rights reserved. Do Not Sell My Personal Information Terms and Conditions Privacy Policy Sitemap Affirm.

Amazonshopper0702 5.0 out of 5 stars Kit comes in two boxes. Top notch parts and bearings. Everything was packaged or blister packed in a secure and organized way. Good color instruction booklets with photos. All parts needed were included and fit as they should. Some things to note have the correct tools before you start this project. He does an EXCELLENT stepbystep installation of this kit and you can take notes on all the tools needed. I would watch those first BEFORE ordering the kit. Overall the install went smooth. Pressing out the universal joints take an incredible amount of pressure, so be very careful and be sure to clean the paint up around the C clip areas on the bearing caps and apply some PB Blaster or WD40 to help. I reused my ujoints as they only had less than 25k miles on them and were in great shape.

One of my trucks unit bearing hubs required a lot of time and force with a puller to remove but the other side fell right off in my hand. I also removed my center diff during this process while the axle was apart to install the Power Wagon front elocker. This required me to also pull the passenger side inner axle shaft seal and inner twopiece axle but you DONT need to touch any of that if just installing the Yukon hub kit. I have now been running the hubs for about 9 months. I have 4wheeled and towed with them and have not had any issues. Actually only issue you will have is REMEMBERING you have them and will put the truck into 4WD and be very disappointed as to why the truck isnt performing like it should. Did that twice in the first month after installation. Got a

good chuckle at myself. The dials will be hard to turn when initially packed up with grease pack them up good and that will help keep water and debris from seeping in. But they will turn and get easier as the grease gets distributed inside the hub. I had to adjust the spindle nut on each side a couple times after installation to get it just right not too snug and not too loose. but better to error on the side to a bit looser vs too snug Be sure to check them after a few miles and then after 50100 miles. Also, the disc brakes will transfer heat down to the hubs after driving the truck and parking it. Dont mistake that heat for the bearings being too tight. If you check them right after hopping out of the truck they should be slightly warm or even cool to the touch. After those initial adjustments I havent had to think about them other than to engage them when needed. Cant really say I have gained any noticeable MPGs like people claim but is sure cant be hurting the MPGs when driving with them unlocked. NOTHING is turning in past the wheel. The hubs DO STICK out a fair distance from the wheel and those center caps which would be the only complaint I have.

If you are running wheel spacers or a wider aftermarket wheel with more offset this will not be an issue. If stock you WILL need to be careful when wheeling you dont hit them on something. Overall very happy with them and the new front e-locker. Yukon makes a solid kit at a more reasonable price vs the competition in my opinion. Hope this review helps. The only reason for a 4 star is. The only reason for a 4 star is the instructions were somewhat vague in both the information and the pictures. Had to call Yukon Tech to verify some information, which they were very helpful with. So far the kit seems to be working fine, though. I might add, though, do not use Amazons vehicle fir information for this. I watched a few YouTube videos that walked through installation. Not terribly difficult but important to be detail oriented. The kit is working great. I also put in a new u joints and ball joints. I have picked up at least 1 mpg but maybe more. The downside amazon promised delivery by Friday. It didn't come Friday. Since it requires a signature I waited all day. It didn't come. It came Monday. When it came Monday, they included only one of the two boxes. When the replacement arrived they actually sent out TWO replacements. Fortunately they sent a second set because there was some damage to one of the kits and I actually used the second kit to finish up the job. Long story short, the boxes are heavy, huge, and come in a set. Amazon seemed confused about how to ship them out. It was spendy but I was happy with the improved fuel economy and the installation went pretty well. Unfortunately, after 5 years of mild use, some of the wheel studs have stripped out the serration on one hub and some studs are stretching from fatigue. I always torque my wheels to the factory spec. No mention of the so called lifetime warranty. This is not great customer service considering I still have to do all the work! Word of caution.

dont forget to install the ujoint shims before the joints are pressed in easy step to miss. Ujoints are NOT included which is a bit of a disappointment so plan accordingly. A hydraulic press makes installing the wheel studs, bearings, and ujoints much easier. It is nice to be able to use 4low for backing trailers without the binding and jerking leave the front hubs unlocked. Gas milage went up approx. 2 mpg, front drive train wear went to nothing. All parts are hardened steel except the selector knob. Everything fit as it was supposed to. For me it is a win. I had aftermarket wheels on my Jeep and had no problem with them clearing the hub. Stock wheels will not work. This kit was for non antiskid brakes which I don't have. Have yet to test it for longativity but have a good feeling it will last. High quality kit! Only thing I would recommend is to get dust seal for superduty where the shaft slides in the front axle. Save all the dirt from going in there! 2004 dodge 2500! When they set out to design the final word in unit bearing replacement, they first wanted to understand the weaknesses of the original equipment found in your vehicle. When the OEM bearings fail, you and your truck are literally stranded until you can replace them, or incur the high cost of towing to your local dealer. Your ABS functions are retained with the combination of a gear cut tone ring that is integral to the design of the hub, as well as our spindle design that encompasses the factory ABS sensor mount and sealing surfaces. When installed, your ABS system is now completely sealed from the harshest on and off highway environments. All of SpynTec kits were engineered from the ground

up from raw steel forgings to the finished product with maintainability, durability, and safety in mind. The hubs were engineered as steel forgings with critical components such as ABS tone rings gear cut into the hub.

Using premium quality materials with a durable metal construction, Mile Marker premium locking hubs are made in a wide variety of configurations to fit nearly any vehicle make and model and are designed to exceed industry standards for the extreme offroader expecting the best performance at an affordable price. While the factory unit bearing is nonserviceable, cannot be inspected, and prone to failure, the FreeSpin Hub Conversion offers ease of maintenance, a much smoother ride, greater fuel economy on Dodge trucks, and longer axle life. The simple bolton kit includes common and serviceable Timken bearings, chromoly spindles, cast nodular wheel hubs, Warn Premium manual locking hubs, and massive 1.50 diameter, 35spline outer axle shafts. Consider an upgrade and substitute the Warn Premium locking hubs to Dynatrac's Dynaloc manual locking hubs for greater strength, reliability, and a short, custom machined bezel to improve your hubs looks. All parts are made in the USA. Aftermarket wheels are required. This kit drives like a dream, the front end feels lighter while steering. I am not a professional mechanic and I completed the work by myself, the install instructions are very good. Tip Use the trucks power steering as a press to remove the stock hub assembly from the steering knuckle. I now have about 5,000 miles on this kit and have gained 46 MPG increase, no exaggeration. I set cruise at 65MPH and get 2122 MPG in my quad cab long bed diesel, amazing. I get 1617 MPG with a slide in truck camper towing a 6x12 enclosed trailer. Like me, you will not regret installing this kit, esp on your Ram truck. Now a negative Right at 2,000 miles I threw a Left Front ABS sensor fault code. I called Dynatrac and they want me to inspect the tone ring so I need to disassemble the hub and pull the rotor splash shield to get to the sensor. The hub is still tight, no highway vibration, so Ive put off the tear down. I plan on doing that this week, will provide an update.

Do your wallet and your truck a solid and get this kit, for me it will pay for itself with MPG gains in about 10,000 miles.
