To calculate the overall star rating and percentage breakdown by star, we don't use a simple average. Instead, our system considers things like how recent a review is and if the reviewer bought the item on Amazon. It also analyzes reviews to verify trustworthiness. Please try again later. Atticus 5.0 out of 5 stars Had to remove the existing catch on the side, and carve out a new one, but it works like a charm now! Interface to gun is about 5mm lower, so no BBs are fed to gun. I was not satisfied, either the clip was broken or the shotgun I bought from y'all was the wrong one. Either way it did not work and I am unsatisfied. It holds the amount of bbs promised and it doesn't fall out for no apparent reason. I would purchase again. The cartridges ordered do not have the correct grooves for my son to use these. We are not toy accessory experts. Seller not recommended. Also very pleased with Amazon's service. HK G36, DOUBLE EAGLE G36C M85p Manual. HK G36, DOUBLE EAGLE G36C M85 Manual. Generally, airsoft guns are divided into two according to its source of power to propel. What is the Battery charge time of Double eagle m83 air soft gun. You should check the manual if it came with one, otherwise I can't help much. [http://cntronics.com/editorfiles/20200907094129\\_9366.xml](http://cntronics.com/editorfiles/20200907094129_9366.xml)

You must be 18 years of age or older to purchase any Airsoft gun. We are not responsible for any harm or accident caused by any misuse of these Airsoft guns. We have separate reviews on each one, but for now we will concentrate on airsoft shotguns. We picked 5 excellent models from some of the best airsoft shotgun brands out there. Check these babies out and see which one fits your style. By the way, you can find the links for airsoft pistols and rifles just under the table below. The M58B model is a heavyduty shotgun that comes with test fire BBs. Easy to load, easy to use. Superfast shooting speed. Comes with cleaning tools. Make sure you read the instructions manual carefully. The BTM47 shotgun will help you start your career as an airsoft player on the right foot! Compact, lightweight, easy to carry. Reloads fast. Superb design. The M3L gives you a satisfying feeling as it fires 3 BBs at the same time, increasing your chances of hitting your target! Nonglare matte finish. Comes with accessories and manual. Allows single and continuous shots. The SD88SB shotgun is attractive, easy to use and it can carry a lot of BBs at the same time. Excellent build quality. The SS02 shotgun is eyecatching, easy to use and suitable for both beginners and professional players. Comes with accessories. Easy to reload. 30 rounds shell capacity. Safe and durable. Click Here It is up to you which one you pick, depending on your skill level, budget and preference. Here are our 5 recommendations, but keep in mind that these brands make other airsoft shotguns and accessories if you want to expand your airsoft gear. If you prefer a triburst shotgun, then we suggest you go for the Double Eagle Heavy Weight Pistol Grip 3 Shot Shotgun. Apart from shotguns and rifles, you can also buy laser sights from this company as well as magazines, pistol barrel extenders and battery packs. Here are the benefits of the M58B Metal Tactical Shotgun and why we included it in our list.

Don't worry, take a look at the other airsoft shotguns made by Double Eagle! It is ideal for those who just started playing airsoft war games. However, if you are a more seasoned player then you might be interested in the BBTac Airsoft Gun Package which offers incredible value for money! You can buy many attractive weapons from this company such as sniper rifles, handguns, submachine guns, shotguns and even heavyduty, fully automatic machine guns. We selected the BTM47 shotgun for our review and here are its strong points. This shotgun is excellent for both beginners as well as professional airsoft players. UTG is a renowned company that doesn't only make practical and versatile airsoft weapons, but it also crafts superb accessories such as laser scopes, hand guards and more. Check out the features of the Combat Shotgun and imagine holding one in your hands. However, if your budget is a bit smaller, then you should go for the M47A Shotgun Full Stock Airsoft Gun from the same brand. This company also supplies highquality 6mm plastic BBs which are available at ridiculously low prices. Furthermore, TSD also makes attractive messenger and crossbody bags which will make you stand out from the crowd. For now, let's discover the highlights of the Airsoft Shotgun, one of TSDs most popular airsoft weapon. This shotgun also has a classic, eyecatching finish. If your budget is a bit smaller then we recommend the Crosman voodoo shotgun spring power shotgun asgm47 instead. This company manufactures highquality airsoft shotguns which are identical replicas of the ones you can find in real life. Most of the products made by Crosman have numerous positive reviews on Amazon already, so it is worth checking out the wares of this brand. For example, here are the highlights of the Pump Shotgun. It is a competitive and exciting game, and don't worry—no real bullets are used. Airsoft players use BBs, which are basically small pellets of different sizes.

They might hurt a bit if you're shot from a close distance, but you'll be fine. Airsoft games might be suitable for you if you like first person shooter games such as Counter Strike, Call of Duty, Halo and

others. In this guide, we are going to focus on airsoft shotguns. If you've seen the movie Terminator 2 with Arnold Schwarzenegger, you probably loved that scene at the end where Sarah Connor shoots the T1000 cyborg with a pump action shotgun, until he falls in a pool of molten metal. That scene represents how much fun you can have with a shotgun which delivers not one, but 3 or even more projectiles at a time, considerably increasing the chances of hitting an enemy. If you want to try out a shotgun, it is a good idea to learn how to identify a highquality one. That's why we created this guide, to help you sort out the good shotguns from the bad ones and learn a couple of tips and tricks. Of course, the market also offers you other alternatives such as really cheap airsoft shotguns, but these are usually made from poor quality materials and they are not accurate at all. The price for a good shotgun is influenced by several factors such as materials, firing speed, accessories included and so on. For example, if you opt for a higherend model, it might fire at speeds of around 300350 FPS feet per second and have a spacious magazine for BBs, but you will also have to take out more money from your pocket. Still, we think it is worth it as this will give you an advantage over your lessequipped enemies. Faster firing rates make you a better player, but if you are a beginner, it wouldn't be a bad idea to start with a less powerful weapon until you learn the ropes of the game. These are just a few of the characteristics of an airsoft shotgun. Novice players might want to start with a standard weapon which fires 3 BBs per shot and is not too heavy, especially if you are a girl.

Once you get more experienced, you can practice with more sophisticated airsoft shotguns to show off your skills. Springpowered ones basically use a mechanical spring to generate power which pushes the BBs or airshot shotgun shells out through the barrel. The barrel itself can be made from aluminum, which gives great accuracy, or other materials, such as stainless steel. You'll also have to decide whether you what you want is actually a shotgun or an a rifle — just like with real guns, there is a difference in how they shoot. Therefore, you can shoot around 10 times until you need to reload your weapon. Still, you can be smart and buy additional magazines so they're ready when you need them. When it comes to accessories, some of them also come with a speedloader and a sling, which allows you to load your weapon relatively quickly. When buying such weapons, don't forget to take into account your preferences related to the color of the shotgun. You can have one in a basic metallic color which can be gray or black, or you can go for ones that are painted using brown, black, red or blue colors. In most cases, the pump will eventually have a different color from the rest of the gun which adds visual appeal. Airsoft weapons always come with an orange tip for safety reasons, so make sure that the gun you get has a visible orange tip that won't fall off or get worn away. However, after a few games you'll get used to that and learn how to preserve your shots until you get in the best position, so that you don't run out of bullets when you need them most. An airsoft shotgun package will also include instructions on how to disassemble and clean your weapon when necessary, and some shotguns come with manufacturer warranties, so keep an eye on that too! These are some of the best airsoft shotguns on the market and hopefully you have already set your eyes on one or more. Pick yours today, and take your airsoft games to a whole new level!

The latter is quite realistic and operates similarly as a steel gun. For a springpowered shotgun, it's powered by each shot. Load air into the base of the gun and fill it with magazines. The great thing is these shotguns have a power adjustment feature. While adjusting the power may vary depending on the gun, it usually involved turning a hidden screw or dial. We have a video in our buying guide with tips on how to make airsoft guns shoot faster. You need to assess the amount of air in the gas chamber and make a silencer that will contain this air volume. You can use a can that's enclosed on both ends. Use a pipe to cover the front sights of the gun. The length of the pipe may vary. You can also purchase a silencer that is made for airsoft shotguns. You need to read the manufacturer's manual on how to assemble, disassemble, and reassemble the the model you have. For best results, arrange all the parts on a surface first and connect each part according to the instructions. Please read our Shipping Policy for more information. Your new Victoria Arduino espresso machine will be

shipped to and carefully received by a local manufacturer recommended service provider. Prior to installation, Victoria Arduino will work with you directly to ensure your space is properly prepared according to their preinstallation requirements. Once these requirements have been met, installation of the espresso machine will be scheduled and completed at no cost to you. Other top attributes are 23, Plastic and Magazine. Also m47 airsoft shotgun 23 round is one of the best sellers in Double Eagle, Double Eagle Airsoft Gun Pistol, Magazine 10 Round and A in 2020. Login to see all details. You can visit our Brick and Mortar store in Huddersfield, near Leeds, Wakefield, Manchester and try before you buy! Save money on your next skirmish! For more information please get in touch via our Contact Us Page. The magazine holds up to 150 Airsoft 6mm BBs and is filled from the top using an Airsoft speed loader. This magazine is perfect for those Airsoft Skirmishers who own an Airsoft M4 and are looking for a great looking magazine to bolster their collection. The shells are easily loaded from the top, by using an Airsoft Speed Loader, by simply pushing the nozzle into the Shells top hole and filling. These shells are a must have purchase for any Airsoft Skirmisher who has a pump action Shotgun, as it allows you to play for longer without having to stop to reload magazines. The shells are easily loaded from the top, by using an Airsoft Speed Loader, by simply pushing the nozzle into the Shells top hole and filling. These shells are a must have purchase for any Airsoft Skirmisher who has a pump action Shotgun, as it allows you to play for longer without having to stop to reload magazines. This type of magazine is perfect for regular Airsoft skirmishers as the magazine holds lots of rounds, and increases the length of time between having to stop and reload, allowing you to put more rounds down range without stopping. Even better a super low cost magazine.

Yep, the price is right this is under 2 for a spare magazine for your Airsoft shotgun. The magazine is constructed from polymer and is fed by a spring meaning no rattle. The magazine holds up to 29 rounds, and is a great spare or replacement, or perfect purchase for anyone looking to increase the number of magazines they carry allowing them to remain in the field for longer. The shell happily feeds in triburst shotguns, holding up to 30 rounds meaning you'll get 10 shots per shell in a trishot shotgun. Although technically a magazine for your Airsoft shotgun, it is called a shell because it looks like a real shotgun shell. The Shell or Magazine is inserted to the bottom of the Airsoft shotgun, and then when emptied is replaced with a new one. This shell is perfect for those Airsoft Skirmishers who have a Double Eagle M63 shotgun and are looking to bolster the amount of shells they own so they can play longer without having to stop and refill their shells. The magazine is constructed from polymer and is fed by a spring meaning no rattle. The magazine holds up to 26 rounds, and is a great spare or replacement, or perfect purchase for anyone looking to increase the number of magazines they carry allowing them to remain in the field for longer. They are available in both Black and Tan and hold a total of 450 rnds each. The magazine holds up to 450 Airsoft 6mm BBs and is filled from the top using a large fill window. Once the magazine is filled with BBs the magazine is then charged using the winding wheel at the bottom of the magazine until BBs feed out the top. This magazine is perfect for those Airsoft Skirmishers who own an Airsoft M4 and are looking for a great looking magazine to bolster their collection. Remember, you can never have enough magazines. Take advantage of our box deals and save money. This allows for your magazines to be wound faster and easier especially whilst wearing gloves. Telephone 01484 644709.

Its basic function is to map either a tooth or a notch into a unique electrical output state. It has an electrical trimming option for postfabrication trimming in order to achieve true power on capability even in the case of production spreads such as different magnetic configurations or misalignment. An additional selfcalibration module has been implemented to achieve optimum accuracy during normal running operation. It comes in a threepin package for the supply voltage and an open drain output.

Oswald got off three rounds with an old Italian bolt action rifle in only six seconds and scored two hits, including a head shot!. Tokyo Marui Double Eagle Sochimi Italian SMG.TEC 9 Youll take my guns when you pry them from my cold dead fingers. Please help improve this article by adding citations to reliable sources. Unsourced material may be challenged and removed.The T80U was last produced in a factory in Omsk, Russia, while the T80UD and furtherdeveloped T84 continue to be produced in Ukraine.Its designer was A. Ch. Starostienko, who worked at the Leningrad Kirov Plant LKZ. The tank was never built because available turbine engines were of very poor quality. In 1955, two prototype 1,000 hp 746 kW turbine engines were built at the same plant under the guidance of G. A. Ogloblin. Two years later a team led by Josef Kotin best known for constructing the IS tank family, the Kliment Voroshilov tank among other tanks constructed two prototypes of the Obyekt 278 tank. Both were hybrids of the IS7 and the T10 heavy tanks, powered by the GTD1 turbine engine, weighing 53.5 tonnes and armed with an M65 130 mm tank gun. The two tanks were considered experimental vehicles and work on them eventually ceased. In 1963, the Morozov Design Bureau designed the T64 and T64T tanks. They used GTD3TL turbine engines which generated 700 hp 522 kW. The tank was tested until 1965. At the same time, at Uralvagonzavod, a design team under the guidance of L. N.

Kartsev created the Obyekt 167T tank.Trials indicated that twin propulsion was no better than the turbine engine which had been in development since 1968 at KB3 of the Kirov Plant LKZ and at WNII Transmash. The tank from LKZ equipped with this turbine engine was designed by Nikolay Popov. It was constructed in 1969 and designated Obyekt 219 SP1. It was renamed the T64T, and was powered by a GTD1000T multifuel gas turbine engine producing up to 1,000 hp 746 kW. During the trials it became clear that the increased weight and dynamic characteristics required a complete redesign of the vehicles caterpillar track system. The second prototype, designated Obyekt 219 SP2,

received bigger drive sprockets and return rollers. The number of wheels was increased from five to six. The construction of the turret was altered to use the same compartment, 125 mm 2A46 tank gun, auto loader and placement of ammunition as the T64A. Some additional equipment was borrowed from the T64A. The LKZ plant built a series of prototypes based on Obyekt 219 SP2. The gearbox is different, with five forward and one reverse gear, instead of seven forward and one reverse. The later T80 models use explosive reactive armour and stronger armour, like the T80U and T80UM1. Other protection systems include the Shtora1 and Arena APS, as well as the discontinued Drozd APS. The later T80U has a large applique of explosive reactive armour installed — providing higher crew and tank survivability than prior models. They are the products of different design bureaus; the T80 is from the SKB2 design bureau of the Kirov Factory LKZ in Leningrad while the T72 is from the Uralvagonzavod factory in Nizhny Tagil. Despite the similarities, the T80 and T72 are mechanically very different. The T72 is mechanically simpler, easier to manufacture, and easier to service in the field.

As such, the T72 was intended to be a tank massproduced to equip the bulk of the Soviet motor rifle units, and for sale to export partners and Eastern bloc satellite states. The T80 can fire the same 9K112 Kobra AT8 Songster antitank guided missile through the main gun as the T64. It is a further development of the T80A and is powered by the 1,250 hp 919 kW GTD1250 gas turbine. It is a step ahead of the GTD1000T and GTD1000TF engines that were installed on the previous tanks of the T80 line. This gas turbine can use jet fuels as well as diesel and lowoctane gasoline and has good dynamic stability, service life, and reliability. The GTD1250 has a builtin automatic system of dust deposits removal. It retains the T80s high fuel consumption, which the Russian army found unacceptable during the Chechen conflicts. It is equipped with the 2A46 fire control system and a new turret. Like all of the previous T80 models, the T80U has full length rubber side skirts protecting the sides with those above the first three road wheels being armoured and are provided with lifting handles. It can fire the 9M119 Refleks AT11 Sniper guided missile and the longrod penetrator HVAPFSDS 3BM46. The remotelycontrolled commanders machine gun was replaced by a more flexible pintlemounted one. A special camouflage paint distorts the tanks appearance in the visible and IR wavebands. The T80Us 1A46 fire control system includes a laser range finder, a ballistics computer, and a more advanced 1G46 gunners main sights, as well as thermal imaging sights, which greatly increases the T80Us firepower over previous models. All T72s, T80s, and even the T90 are to be replaced starting in 2025 by a new Russian tank, the T14 Armata. The Omsk Tank Plant in Siberia is facing a shortage of domestic orders, unlike the Ukrainians who embraced the T80 design and have had success updating and selling the tank.

The Russians have only sold a small number of T80 tanks to South Korea, Cyprus and China, and have demonstrated versions intended for export, including the T80UM1 with active protection systems, and the advanced T80UM2 Black Eagle concept tank. Although T80 production has stopped for the Russian Army, the Omsk plant still makes the tank for export. It retains the remotelycontrolled commanders machine gun. About 500 T80UD tanks were built in the Malyshev plant between 1987 and 1991. About 300 were still at the Ukrainian factory when the Soviet Union broke up, so the T80UD tank was welcomed into Ukrainian military service, and therefore is more common in Ukrainian service than Russian. It had a new welded turret, a 1,200hp 895 kW 6TD2 engine, Kontakt5 reactive armour, the Shtora active protection system, a thermal imaging sight, a muzzle referencing system, and an auxiliary power unit. In 1999 a new variant, T84, appeared. This modification got many improvements, including deeper sideskirts, modified reactive armour, a small reference radar antenna near the gunners hatch used to track rounds and compensate for barrel wear, and a large armoured box for an auxiliary power unit at the rear of the right fender. Unlike Russia, Ukraine has had much better success selling T80s but not T84s to foreign customers. Cyprus bought a number of T80Us and T80UKs from Russia for its army. Pakistan, countering India's adoption of the Russian T90, bought Ukrainian T80UDs for its main armoured corps of the Pakistani

Army. The T84 Oplot ten delivered in 2001 introduced turretbustle ammunition storage, and to offer more sales to international market, the T84120 Yatagan has been offered for export, featuring a very large turret bustle and NATOcompatible 120 mm gun. In 2010, Bangladesh discussed a major purchase of T84 Yatagans, however finally dropped it in favor of MBT2000s.

In 2011, Azerbaijan announced its intention to buy Ukrainian T84 Oplots for its ground forces, but subsequently decided to purchase ninetyfour Russian T90s. Lessexpensive versions without missile capability have a figure 1 added, as T80B1. This model does not have fittings for explosive reactive armour. The turret is from the T64A, and thus retains the use of the old coincidence rangefinder. Characteristics of this type are the V shaped water deflector on the front glacis, coincidence rangefinder in front of the commanders cupola, and Luna searchlight mounted in the same position as a T64. Around 250 were produced, as the tanks armour was essentially obsolete when introduced. It reportedly was fitted with an early version of the Shtora APS. An improved, 1,100hp, engine was added in 1980, a new gun in 1982, and fittings for reactive armour in 1985. Reactive armour added protection of 400 mm equivalent armour to defend against HEAT warheads. It has the T80Us turret, but not the Kontakt5 ERA. Often misnamed T80A. In 1990 a new, 1,250hp, engine was installed. Changes include the 6TD diesel engine, remotecontrolled commanders machine gun, and better optics. None were produced. NATO realized that new Soviet tanks could reach the Atlantic within two weeks and because of that started to develop counter methods that could stop them. This led to a sudden increase in development of antitank weapons including attack helicopters. They were deployed during the political and economical changes in Russia in the 1990s. In August 1991 communists and allied military commanders tried to overthrow Mikhail Gorbachev and regain control over the unstable Soviet Union. The T80Us have recently been seen at arms expos in Russia such as VTTV. On 4 October 1993, six T80UD MBTs from the 12th Guards Tank Regiment, 4th Guards Kantemirovskaya Tank Division took positions on a bridge opposite the Russian parliament building, and fired on it.
