17 Fuel filter renewal

1 The fuel filter is located at the rear of the engine compartment, behind the power steering fluid reservoir on the right-hand side (right as seen from the driver's seat).

2 To improve access to the filter, lift the power steering fluid reservoir upwards and unclip it from its mounting on the inner wing. Move the reservoir to one side, without disconnecting the fluid hoses, and keeping it as upright as possible (see illustration).

3 Note the positions of the fuel pipes on top of the filter carefully, so that they can be refitted correctly. The filter supply pipe and the outlet pipe (to the injection pump) have a white band, while the return pipe has a red band. Have some clean rags ready, to soak up any fuel spillage.

4 Pull out the spring clip retaining the return pipe and control valve to the top of the filter, and fit the assembly off without disconnecting the pipes (see illustration).

5 Separate together the hose on the quick-release pipe fittings, and disconnect the fuel supply and filter outlet pipes from the top of the filter – be prepared for some fuel spillage (see illustration). It is most important not to introduce any dirt into the fuel pipes while they are disconnected, and as little fuel as possible should be lost from the pipes, to make starting the engine easier on completion. If the pipes are to be left disconnected for long, they should be capped or plugged.

6 To remove the filter, loosen the clamp screw, and remove the filter from its holder, noting the alignment arrows on the holder and filter (see illustration).

7 Refitting is a reversal of removal, noting the following points:

a) Line up the arrows on the filter and its holder (see illustration).

b) Tighten the filter clamp screw securely, but without coating the filter body.

c) Before fitting the pipes, the filter should be filled with clean fuel – use a small, clean funnel (see illustration), and have plenty of clean rags available, to soak up any spillage.

d) Make sure that the pipe connections are correctly and securely refitted.

e) Start the engine, noting that it may be necessary to idle the engine for longer than normal. With the engine running, check for fuel leaks from the disturbed pipes.

Minimizing your car's weight will do a few things. A lighter car will accelerate more quickly and will

also get better gas mileage. However, by replacing them you may be able to save some weight. This isn't a free option of course, but aftermarket roofs and hoods exist that are lighter than the ones that come stock. This can make your turns feel sluggish. This is caused by the struts folding inward. By installing a strut tower brace you can keep this from happening. And, if you can't find one for your particular engine, they are pretty simple to have fabricated from just a piece of steel. Remote starters allow you to start your car from a distance with a key fob or even a smartphone app. This is an awesome convenience, especially in the winter if you live somewhere cold. Just think, while you're still getting ready to leave in the morning, your car could already be warming up without you even having to go outside. With some of these simple customizations, you can really make your car your own. These cheap car upgrades will give you some sweet features to personalize your ride and you'll still be able to afford to put gas in it! Put simply, a laser cutting machine usually uses electrically stimulated CO2 to create a beam strong enough to cut through metal. The CO2 is then fired through the nozzle with enough energy to create a laser beam. They are also much safer than many other cutting methods, and most energy efficient. If you go to an expert fabrication shop that specializes in cutting metals with lasers, they will be able to offer a wide range of services for you. Laser cutting machines are easier to use than ever, meaning that more people can take advantage of this innovative technology. Here are just a few ways that laser cutters are used in automobile repair. Make sure to read our extensive Auto Repair Manuals for expert advice and information on car repair.

Mechanics can easily rip you off if you aren't careful, and you definitely don't want to be spending more money than you need to. It might be because they provide a higher quality of service, or they could be trying to rip you off. So, be cautious. Be sure to ask each shop what certifications they have to make sure you're getting a quality mechanic. If you have a specific type of car that needs repair, look for a shop that specializes in that type of car. Sometimes these agreements are specific on what kind of repairs can be done to your car. But instead of blindly agreeing with them, ask them to expand on what exactly they are going to do. When It's Worth It and When You Should Bail After years of time together, there's no discounting sentimental value. And if you've paid your car off, why buy a new car and reintroduce car payments to your monthly budget. The cost of replacing new parts can easily exceed what you pay monthly for a new vehicle. Still, determining whether you should repair or replace your car is a fine line, and it's not all about money either. Is now the time? Let's find out. It's been yours for years now. Unfortunately, car payments are only one source of total vehicle expenses. Consider the cost of interval maintenance and unexpected repairs. These financial burdens would be otherwise avoided if you bought a new car. Not to mention, you'll no doubt experience unexpected breakdowns that carry their own expenses. When you divide your annual expenses into monthly intervals, how much is your used car really costing you. Use the Kelley Blue Book to estimate the value of your car in its current condition. And if it's a massive expense, it may make more sense to put that towards the down payment for a new car. In this situation, the cash you spent on repairs just went down the drain. It's important to consider your personal satisfaction when dealing with something as stressful as an old vehicle.

If you're afraid it can't get you to work safely or reliably, that's a good sign you need a new vehicle even if the current one is cheaper. Sometimes these worries can manifest into real financial disasters, such as losing your job from poor punctuality or incurring medical debt as a result of an accident caused by vehicle failure. You'll likely need to dig into your savings for a down payment. Plus, your car loan will carry interest, and if your credit isn't great that can put a hamper on reasonable buying opportunities. If unexpected car repairs are already costing you thousands of dollars every year, taking on a car loan may have very little effect on your current car expenses. You could get your hands on a new vehicle for as much as you're paying now in maintenance fees. Even

for junkers, you can recoup some cash if you know how to sell a car that doesn't run. Don't wait for your current car to break down completely before purchasing a new vehicle. That could put your health and employment at risk. Not to mention, they come with massive price tags and monthly car payments that only the well-off can afford. If you're not sure if you should repair or replace for financial reasons, you should probably shy away from buying a new car. This is the cheapest way to use a new car since you're only renting it. But it's also the most expensive way to own a new car because your monthly payments don't become equity. These are usually cheaper than leased vehicles. It's an improvement if your car is on its last legs, but otherwise, you're inheriting new repair problems. If you're spending an outrageous amount on car repairs, especially for a vehicle with low market value, it's time to buy a new car. At that point, your decision to repair or replace is personal. You'll have to decide if the peace of mind and convenience of a new car is worth the asking price. Stay tuned into our website. Keep reading to learn 7 benefits of buying a truck.
