Need some reliable companion on your w. It

only takes a minute to sign up. How can I service a DT swiss 240 front hub, as in remove the adapter end cap to get to the insides. Do i need a special tool. Does it even need servicing. There is plenty of info out there on how to service the rear hub and I have already done that but I cant find anything on servicing the front hub. Please help. Service includes removing the endcaps, removing the bearing seals, regreasing the bearing cartridge, and then reversing the process.<http://www.oglethorpeclub.org/~oglethor/UserFiles/daewoo-dwc-0520rle-manual.xml>

The end caps are a friction fit, and, while they are tight, they will remove by hand. Or at least, strongly recommend them. Issues generally only appear in the rear freehub, since the bearings there are the most exposed, and under the most direct load. The front hub will need greased or replacement bearings once a year, more in wet or muddy riding conditions. Yes the end caps are very tight, I was having trouble getting them off. That is basically the reason for my post. I figured they were removable by hand as are the rear, just wanted to be sure. But its just a dry oring inside the axle cap that causes it to bind. Wipe a light coat of grease on those orings 1 each side and it will be easier next time. Please be sure to answer the question. Provide details and share your research. Making statements based on opinion; back them up with references or personal experience. To learn more, see our tips on writing great answers.
