When a phrase is selected with a MIDI Program Change message, it While the current phrase is playing, enter Patch Select mode by pressing always loads immediately, even if the Phrase Change mode is set to. The Input mode settings affect how audio signals are In Single mode, only one phrase can play at a time. Destination patch name When shipped from the factory, the RC50 has demonstration audio saved in Patches 15, and Preset Protect is enabled. Use the following procedure to copy a previously saved patch to another Select the patch that contains the phrase you wish to copy. Keep an eye out for other RC50 Workshop booklets, available for downloading at www.BOSSUS.com and www.RolandUS.com. For the latest RC50 updates and support tools, visit the BOSS U.S. www.BOSSUS.com Web site at. If you need personal assistance, call our. Reading Mailing List Info Mailing List Archive File Library Any RC50 users out there want to help out. If you are interested, want to provide a review, user tips, or have any information on using the RC50 for looping, please contact us. If you are buying it anyway, why not let some of your cash go to your favorite web site Thanks. By avoiding online auction sites we can keep the costs The 7 footswitches mean that most of the functions are handsfree, which is great for not interrupting that creative flow. The sound is ultraclean, and with multiple input options, its possible to capture sound from almost any source. Computer interfacing is possible by MIDI and a dedicated USB port. It is extremely well built as you would expect from a former Boss flagship product with large and clear displays. The main thing is, is that it is so easy to use and great fun as well, with several operating modes to suit any style of working. Budget loopers are great, but you will bump into limitations so, if you want to play with the big boys, this is the one to go for! An adapter is included.

There are one or two minor scuffs to the side and bottom of the case which have been touched in with a paint pen. Please view the photographs to judge for yourself on the physical condition. Please see our TERMS and CONDITIONS for details of our standard warranty. A printed and bound copy of the manual is included with this item. Introducing the RC50 — the most featureladen Loop Station BOSS has ever built. It's the best live looping tool ever built for that matter. Housed in a spacious sevenfootswitch floor unit, the RC50 lets you manipulate three stereo phrase tracks simultaneously. Each track supports multiple overdubs, so phrases can be stacked one by one on each track, resulting in a monstrous layer of looped phrases. With a single RC50, a guitarist, bassist, keyboardist, or vocalist can create a perfectly synced wall of sound live onstage. There are three simultaneous stereo phrase channels on the RC50, each with a dedicated footswitch. For scenarios such as these, the RC50 can be locked to an external MIDI clock source, ensuring that its loop performances are absolutely locked to the rest of the show. Internally, the RC50 offers Loop Quantize for easy loop recording, plus Loop Sync which enables all phrases to start in sync, and Tempo Sync which matches the tempo of multiple phrases during playback. Why record to a stale click track when you can jam with rockin' grooves instead Phrases can be retrigged in "free time" or on a timealigned grid. The photographs are of the actual items offered for sale, and not library photos. Whilst every endeavour is made to ensure this information is accurate, we might slip up from time to time, in which case we apologise. If our error is serious enough for you to change your mind about a purchase your sole remedy is as stated in our terms and conditions. All rights reserved.

After raising the bar with the RC20XL, they attempted to build the holy grail of looper pedals with the RC50 Loop Station. You should note, however, that Boss has since released RC300 Loop Station, which is the newer version of the RC50. In fact, it's basically a pedal board unto itself. It weighs in at around 6 pounds, and is almost 19 inches wide. The unit has 7 footswitches, and allows you to simultaneously

play up to 3 stereo tracks. The possibilities swell to epic proportions when you realize that each of these tracks can also contain multiple overdubs. The RC50 can record any instrument, including the human voice, and has a vast array of input and output ports to facilitate fits of wild experimentation. This may not seem like a lot in terms of computer harddrive capacity, but for a pedal, it's massive. You can also connect to your computer via the USB port to import and export data, which means you can also store your loop library externally. These are somewhat self explanatory. Singleplay allows you to play one of your stored phrases at a time, and multiplay allows you to play multiple phrases at the same time. The parts each have their own pedal, so switching between them is easy, even when performing. The three phrases are collectively referred to as a "patch." By allowing phrases to be played on top of each other, you can create more densely layered sound. This is useful in many ways. For example, if you have a rhythm section saved as Phrase 1, you can then record a melody as Phrase 2 and play the two together while still soloing or adding new layers. When you want to break the song down to just the rhythm again, you tap a pedal to stop the melody.

You can tap the pedal again to bring the melody back at any point in the song. If that isn't enough, you can even overdub the melody, adding layers upon layers of sound. Of course, if you want to be creative without using the The Guide, you can keep it turned off and just work with your own sounds. The RC50 has a "Loop Quantize" feature so that when you're busy jamming with The Guide and miss the beat by a second, it's automatically corrected. Loop Quantize stretches or shrinks the overdub to keep the timing perfect. The only problem with this is that the pitch does change. If you're close enough, you won't notice it at all, but there is still a risk of suffering a slight change if you come in really early or late. Temposync works on any patch Guide or none, and allows you to set a tempo and have all of your patches altered to fit your selection. Alternatively, you can tap out your tempo using the "Tempo" pedal, or allow the RC50 to calculate the tempo itself. Yep, it's that clever. It's very useful in those all too frequent cases where you're a little off, though it can be a hindrance if want to use different tempos. All this is accomplished without altering the original pitch. Ordinarily, you would have to tap your foot precisely when you wanted the next section to play, but the RC50 has "One Shot" mode, where the phrases play once, and you queue the next phrase up to take over as soon as the preceding one ends. Along with this comes the ability to play phrases in reverse, set the looping to stop at the end of the phrase, or to fade out. The sheer amount of functionality on the unit could certainly confuse a newbie who just wants to solo over a basic 12bar blues. On the other hand, an amateur won't outgrow the RC50 any time soon. Three of the seven pedals are used to select a phrase, and the other four have simplistic purposes. This is used simply to begin recording, and then again to end the loop.

www.everhouse.it/wp-content/plugins/formcraft/file-upload/server/content/files/1626f3194b10e3--bosch-tools-manuals.pdf

The loop restarts and you're free to start overdubbing as you please. They really do think of everything. When you hit the pedal, the loop just restarts and lets you go for it again. This is particularly useful if you flub a note at a gig, as it will be forgotten in seconds. But for all the pedals on the RC50, additional pedals are arguably still needed for live performances. If you wanted to incorporate reversing phrases, remote starting and stopping of the guide, or start all three phrases simultaneously, you would have to dig down in your wallet and buy additional pedal controllers, unless of course you have extra hands. Boss's solution was to release a new version of the system, with the option to switch to "Rhythm Priority" mode, which corrects this change, but eliminates some of the better features, such as the Temposync, leaving you on your own to time your taps perfectly. Along with this, if during a performance you clip the input jack, or become overzealous and play too loudly, it can cause the sound to cut out completely for a second, before creeping back up to normal volume. There is so much that it can do that a few glitches and errors mean relatively nothing in comparison. The sound it captures is CD quality, and although the memory is relatively

small, if you plan to use a lot of prerecorded material, it is still ahead of a lot of the competition, and the ability to save patches externally is a partial remedy to this problem. There will always be errors with machinery, and I, for one, hope that the imperfect looping pedals of the future take up the many great features on the RC50. It's a pleasure to play, and truly has the power to rekindle your love of the guitar, and your love of making music. After raising the bar with the RC20XL, they attempted to build the holy grail of looper pedals with the RC50 Loop Station. But is the RC50 really the holy grail, or did they miss the mark. For some basic info on looping, [click here](#).

Check Amazon Price Just purchased a Ditto x2 looper. Occasional. Jacquie Drew said 2 issues 1 Why doesn't this looper allow immedia. Peter said LOL. Okay, thanks! Did you find this review helpful? AJ said Nice review, but please learn the difference between. The boss RC50. I purchased the RC2 and loved it. Then I went to the RC20 dual and loved that so naturally I went to the RC50. Still loving it and planning on upgrading to the RC300. This has low hours on it, functions just as it should and comes with the manual and Power source. Please check the fields highlighted in red. There is one very small scrape on the back panel which is just cosmetic. There is a good video about this pedal here [Here is the info from Roland](#). Introducing the Roland RC50 Loop Station. The most featureladen Loop Station BOSS has ever built. The Roland RC50 is one of the best live looping tools ever built. Housed in a spacious seven footswitch floor unit, the RC50 lets you manipulate three stereo phrase tracks simultaneously, with each track supporting multiple overdubs. In other words, you can record phrase upon phrase, one by one, on each track, resulting in a monstrous stack. The RC50 has plenty of other noteworthy features on offer, for example Phrases can be played forward or backward. Phrases can be retriggered in free time or on a timealigned grid. When you purchase through links on our site, we may earn an affiliate commission. Learn more A musttry product. Lack of click for live drummer. With BOSSs RC20 and the upgraded RC20XL things went decidedly mainstream and DigiTech also entered the fray with an upspecd version the JamMan.

Even Line 6s DL4 also provided basic soundonsound looping too while Akais Headrush has quite a following including KT Tunstall, and you cant get more mainstream than that. ElectroHarmonixs 16 Second Delay is another option and the companys 2880 is a fourtrack digital multitrackercomelooper. Part multitracker, looper and rhythm machine, its potential as a performance instrument is vast, matched only initially at least by its complexity. In basic terms the RC50 offers three loops phrases that can be recorded and stored into one of 99 patches. Each patch can be named and the phrases within can become song specific. Unlike, for example, the DigiTech JamMans, removable media, the RC50 has onboard memory that equates to 24 minutes of recording time stereo and 49 minutes in mono. This might seem slight but dont forget the RC20XL only had 16 minutes of monoonly recording time and were not talking about recording threeminute phrases although thats perfectly possible. Most loops, by the nature of the concept, are much smaller in length four or eight bars for example which are then continuously repeated. This is essential for backup, but also to free up the onboard memory. The RC50 is certainly not guitarspecific. We have aux 3.2mm stereo jack for CD etc., mic XLR with phantom power and instrument 6.4mm jack inputs each with their own level controls and global red LED peak indication. You can record from all three simultaneously but only to one phrase. A centrecancel function allows you to lose typically lead vocal and lead guitar from a prerecorded source, and the flat amp function adjusts the tone of the recorded audio to sound more accurate through your guitar amplifier. But the RC50 isnt just intended to send its output to your instrument amp. A very sensible feature, along with the main stereo outputs, is the inclusion of stereo sub outputs.

You can configure, if needed, the main outs to your guitar amp or via the sub outs to the PA or

another guitar amp and you can do this for each phrase within a patch or globally. And because you'll probably be spending a considerable time working with the RC50 afterwards, a 6.4mm stereo phone jack is supplied. The RC50 is impressively presented with its all-metal construction, clear large red LED patch number indicator and smaller but highly visible LCD display the fact that you can name patches is essential for live performance. The lower half of the unit houses seven footswitches there's facility for four additional control switches too. The upper half of the unit is sensibly laid out and although the pushbutton quota is high, the rotary controls make it easier and quite fast to navigate. At this point, we have to say however that from a guitar player's viewpoint at least, the manual though extremely comprehensive is not written with your typical guitar-wielding luddite in mind. The top side of the unit is where you'll find all the aforementioned connections and again it's reassuringly stageworthy with proper metal chassis jacks. Powering is from a supplied mains adaptor but the proximity of a strain-relief clip means even this feature has been thought through this really isn't a cheaply made unit for home use alone. In use The RC50 offers two play modes multi and single. In basic terms multi allows you to record each phrase to one of the three locations and like a multitrack play them back either individually or simultaneously. So phrase 1 could be a rhythm guitar, phrase 2 a bass part and phrase 3 a lead fill you can then happily solo, sing or dance over the top. There is a fair bit of tap-dancing involved when looping live but, to be fair, that's part of the loopers skill. Loop sync on or off allows you to either play each loop continuously off or from where it actually originally started in relationship to the longest loop on.

In single mode, you can switch between your recorded phrases voicing one at a time ideal for intro, main and end patterns, for example. The rhythm guide of some 50-plus patterns is like a preprogrammed drum machine and the sounds are really very good. Admittedly, if you're a home recordist with a library of drum sounds and loops it's pretty basic, but to get you going it's more than adequate. This rhythm guide info is retained once you save simply save your patch and can be outputted, like each phrase, to the either or both of the main and sub outs effectively giving you an extra track. Inexplicably, there's no click pattern, or separate monitor out, that could be sent to your drummer via headphones. So plug in your guitar, kick off the rhythm guide and lay down your first phrase. Each phrase can be overdubbed play the same chord part and you instantly create a natural chorusing or you can add a harmony line. Believe us, in minutes you're stacking parts, kicking then in and out and that's just with a clean guitar straight into the RC50. You'll be hooked. There are numerous neat features; not least the reverse phrase function. For example, you can reverse a recorded chord pattern, work out a solo part over it, then restore the original pattern and reverse the overdub instant and intune reverse parts. You can alter tempo after you've recorded a part and although the audio quality gets a little warbly, it can be useful, for example, to work on difficult parts that you're trying to play. With comprehensive MIDI specification the RC50 can be hooked into a sophisticated setup or trigger auxiliary sequencing devices. Bottom line, the RC50 absolutely encourages creativity. Yes, it takes a little while to get your head around the basic functions but we can't think of any guitarist or musician in general who wouldn't find a highly productive or fun use in practice, performance or songwriting You will receive a verification email shortly. Now comes an ultracompact member of the RC family, the RC2. House in a compact pedal case, the RC2 puts a surprising amount of features in a small stompbox. Each of your layered loop creations can be stored to one of 11 internal patch preset locations. As powerful as this little Loop Station is, it's a dream to operate. Thanks to its clearly labeled buttons and knobs, the RC2 puts everything directly under your fingertips, with no hidden menus or commands to impede the creative process. Due to its standard compact pedal shape and size, the RC2 fits perfectly alongside other BOSS pedals. Great for fast setup and convenient transportation. With the superdeluxe RC50 at the top of the line, and the twin-size RC20XL in the middle of the range, the RC2 represents the most compact and affordable Loop Station.
