We will reply your inquiries as quickly as possible. Features Sweep frequency eliminates standing waves and creates consistent cavitation throughout the tank. 40 kHz rugged industrial transducers. 99minute digital timer with continuous ultrasonic operation. Specifications. Wish they could make it a sticky at the top of the forum.I cant believe that Branson would set up production to make their own filters but other members have said that the hydraulic filters, for example, are Branson specific something to do with bypass valves. Here in Oz there is only one yes 1 Branson vendor and, as a result, filters cost 50% to 100% more than in the States.I have found Donaldson and other brands air filters that suit the Branson but the oil\fuel\hydro\HST filters are all Branson labelled in Korean and no one has found their part numbers in any of the cross check catalogues. If your contact has generic part numbers it would really help us poor cousins Down Under.

Cheers, GregIm a month out from buying my Branson and not sure if Im going with the 47 or 55 HP one. Going to check prices next week and start narrowing down the attachments.Im a month out from buying my Branson and not sure if Im going with the 47 or 55 HP one. Going to check prices next week and start narrowing down the attachments. Mowing 6 ft grass with a 78" flail mower, the tractor lost about 50 rpms. The power and grunt are awesome. It needs to have the rear tires loaded, and I would suggest AG tires over the R4 industrial options. I have R4 and wish I had the grip of the AG options. Get a canopy to keep you out of the sun. I am pleased.This thread should definitely be fixed on top. Anyone know a moderator. I think I can add some more stuff to this, like parts manuals and operators.On my 3725 about 16 psi is low enough to get the bars on the ground all the way across the tire. They came from the dealer and after adding RimGuard at more like 25. Its not a huge difference but its noticeable. The rapid growth of the Korean company Kukje Machinery Co., Ltd the first name of Korea Agricultural Machinery Co., Ltd. , which manufactures Branson tractors, began in 1968. The starting point in the development of Kukje Machinery for the needs of the agrotechnical sector was the establishment of its own plant. Further cooperation with the Japanese corporation YANMAR Agricultural Equipment Co., Ltd allowed the company to reach a new level of technical innovation and open its automated diesel engine assembly line in 1995 for a wide range of selfpropelled vehicles. The line of tractors Kukje Machinery is characterized by reliability, efficiency, compactness, simplicity and convenience, it is marked by numerous international certificates, awards and awards. Branson Tractor LLC, as a subsidiary of Kukje Machinery, was founded in the USA in November 2003. The heater is fine, but the ultrasonic is nonexistent. All the unit does is lightly hum when the timer is on.

webhostmurah.com/wp-content/plugins/formcraft/file-upload/server/content/files/16270685ebb8f4---boss-rt3-manual.pdf

Any idea how to troubleshoot or, better yet, repair this. Couldnt find any help in the way of schematics or troubleshooting on the Web, other than a factory repair. Did open it up and there are no obviously friend components inside and the two fuses on the circuit are OK.After a while, the transducer, which was epoxied to the bottom of the tank, cracked and the wire came off. Branson said it could not be repaired and offered to sell me a new cleaner. You must have water in the tank to test whether the unit is working prperly. Never run it dry. LarryNo wonder all the American manufacturers are going out of business. Their customer support sucks.Basically the 1220, 2200, 32005200 and 8000 series. Lemme know if you want one of them. JRoucheThe circuits are very simple. I just opened them up and traced out the circuits in my notebook. I worked harder than I needed to figureing out the feed back paths in the oscilator as the it wasnt related to the problem but I finally figured it out. Mine were smaller 250 watt units but there could be similarities so Ill post

what I know and see if it helps. These units generate high voltages when on so be careful. The output forms a resonant circuit with the transducers. Added capacitance on the output can cause spurious oscillations and damage the output transistors so don't probe there with anything but a high impedance probe. I learned this the expensive way. My units had a fuse soldered onto the circuit board so check this. The unit first rectifies the AC so check the output of the diodes for about 250 VAC. This feeds a cascade pair of large FETs. My units used feedback from a small series transformer on the output to drive the FETs into oscillation. After the transformer was a large choke coil to resonate the transducers. The 250 W unit used two transducers connected in parallel. At the operating frequency the transducers look like a large lossy capacitor. That's all the circuitry that was on the PCB. Very simple.

Either there is an open somewhere, possibly a loose wire, or one of the FETs is blown. Pretty simple. As you do, I looked at taking it apart but the big makers label on the front was stuck over two of the cover screws. So not wanting to screw up any warranty I called Branson, who in the UK no longer have anything to do with Ultrasonic, but have sold the rights on. The new company told me to send it straight back as this happens enough for the guy on the phone not to quibble. This model was made in Mexico. Thanks, Regis Very good service. no affiliation, just a satisfied customer. Alpha Omega Ultrasonics Corporation 2821 National Drive Garland, TX 75041 Tel 8005404967 Fax 9728403668 They are one of many listed on the branson web site. When I turn on the power, the digital display scrolls from zero to 99 and one LED is illuminated but none of the controls works. Just by coincidence, I discovered that if I depress the start/stop button while the power is switched on, the cleaning circuitry works but not the heater or other mode controls. So I know the transducer circuitry works but it sure would be nice to have the heater. Like Pete, no visually obvious damage to the electronics and electrical troubleshooting is beyond my simple understanding. The external fuse is good will check the circuit board for anything looking like a fuse. I presume the control circuitry is defective. Any other suggestions for things to check. Anyone possibly have a defective 8200 for parts. JRouche, will send you a PM. Thanks, Jim Very good service. no affiliation, just a satisfied customer. Alpha Omega Ultrasonics Corporation 2821 National Drive Garland, TX 75041 Tel 8005404967 Fax 9728403668 They are one of many listed on the branson web site. I have an older, almost NOS Sonicator that died. It's a huge tank with a remote sonic generator. The generator appears dead.

I got a great deal on this unit and it worked when I bought it, but a month later when I got to hooking it up it was DOA for some reason. I'd REALLY like to get this unit running about 20 gallons but it certainly isn't worth a G-note plus to me at this point. Alpha guys would turn it around in a day or two. I think they repair any brand cleaner. Ours run 12 hours a day. We have found no brand to be better than any other. It's the nature of all those vibes to eventually play havoc on the electronics. Go on the Branson sight there are many independent repair people listed. I am a lab manager in South Africa, so making use of Branson specialists isn't an option. After many phone calls we found these folks. Did what they said, when they said, for the price they said. Seems the tank drain is mounted right above the PCB and seeped fluid onto the board. I re-mounted the transducer and replaced the resistors. I left the transducers disconnected to see if there was still a short in the system and the main resistors popped. As some of the other posters have done, I would pitch the defunct Branson and get another brand.
