Reload to refresh your session. I have mine with code 02. If your cooler is fitted with a drain valve, check that the drain is not blocked. What is the keypad sequence to change the auto drop rate of the water. Changed ours years ago to 2 hours because we hard hard water back then. How did you guys fix it Make sure the solenoid is letting water into the unit and make sure the float valve is opening properly.

<http://essentialchef.com/images/930c-manual.pdf>

Sometimes these valves will jam open through failure and the water comes into the unit and runs straight out. There is a sensor which checks to make sure the water is in there before starting up the pump and if it doesnt sense any water after a few minutes it will shut the unit down with an 02 fault. Air Conditioning Posts, evaporative cooling Breezair, the art of air conditioning cleaning and maintenance. We always recommend to our valuable customers that cleaning and maintenance be carried out at the end of the summer season and at least once a year. The recommended process is set out in the owner's manual, however we recommend Rite Price Heating and Cooling's highly experienced personnel to be called for any maintenance activities. But if you must attempt it yourselves, remember to only use clean water at each cleansing, as it does not leave a residue or odor. However, if the cooler is operating under very harsh or extremely intense conditions, it may require a maintenance check more frequently. You may be wondering if there could be an air conditioning system that could work all year round and season round without maintenance, well there is!! For Seeley International units air conditioning with the "no seasonal maintenance" feature, you do not need annual or end of season cleaning. However, we always recommend that the air conditioner will still require routine maintenance checks on an every other year basis. If your cooler is operating under very harsh conditions, it is highly recommended that maintenance checks be conducted more frequently; this is a general advice for our valuable customers just to keep the air conditioning on the best track. Always use clean water when cleaning the cooler; to avoid odors, also you want the air around your home to be clean and fresh for a healthy environment for yourself and your family.

<http://erka-techserv.com/images/93220-b-manual.pdf>

WARNING As your cooler is mounted on the roof, we always suggest to everyone that appropriately trained and qualified personnel from Rite Price Heating and Cooling carry out any maintenance or checks works for you. Climbing onto the roof can be hazardous and could result in injury to you and

damage to your property, your safety and the wellbeing of everyone around you is our number one priority. When should I replace the Chillcel pads the ones that look like honeycomb on my air conditioner. With ChillCel Pads, you should expect to change these every seven to eight years, and that duration is considerably long enough for any machine residing in an air conditioning system to operate without being checked or changed. Although this may vary with water quality and the local conditions surrounding your area, as we have discussed earlier that it's very important to keep the water clean. When should the Aspen or Woodwool pads the ones that look like wood shavings on my air conditioner be replaced. With Aspen or Woodwool pads, you should expect to change these every three or four years. Also this change may vary with water quality and the local conditions surrounding your residing location. I bought the "no seasonal maintenance" feature, so does this mean I do not have to do any maintenance checks at all. Your pre and post season clean is not necessary, however your routine maintenance checks are still necessary on an every other year basis, as per what we have discussed in the above section regarding necessity of maintenance. If your cooler has been operating under harsh conditions, it may require maintenance check more frequently than when operating under normal conditions; this is just to make sure all is well with the air conditioning system. Check your Owner's Manual, for more detailed information on this give Rite Price Heating and Cooling a call, and one of our very knowledgeable experts will speak to you and answer your questions in detail.

WARNING As your cooler is mounted on the roof, we suggest that appropriately trained and qualified personnel from Rite Price Heating and Cooling should carry out any maintenance or checks works for you. Climbing onto the roof can be hazardous and could result in injury to you and damage to your property. At Rite Price Heating and Cooling, all our personnel are very well trained with decades of experience in the air conditioning industry. Therefore you can relax with a cup of coffee or take a walk while the work is being done as quick and easy as possible on your behalf. Why is Breezair Unique. A lot of people have asked us many times why is Breezair unique. First of all, Breezair units feature advanced technology and a range of unique and clever design features that combine to achieve the highest cooling performance of any similar air conditioner that has never been matched by its competitors. This advanced technology has made Breezair a leading figure in the air conditioning industry. Secondly, Your home deserves the finest ducted evaporative air conditioning available in Australia. Now going deeper A Breezair Supercool Icon series evaporative air conditioner uses up to 90% less electricity than refrigerated units including split systems and reverse cycle air conditioning and up to 40% less electricity than conventional ducted evaporative air conditioning systems without an inverter. If you need more information or enquiry, visit www.ritepriceheatingcooling.com.au or call Rite Price Heating and Cooling specialist for a free quote on any of our product on 1300Cooling or 1300Heating today and we will look after you. Our confidence stands in the decades of hears of experience we have in the air conditioning business. We are the name to be trusted.
