The company specializes in a wide range of outdoor and power equipment, including generators, snowblowers, and small engines that power some of the world's top lawnmower brands. Because the company specializes in many outdoor products, the company decided that it should also release manuals in a responsive web format so that customers can easily browse manuals on mobile phones. The company had created numerous complex customizations to the DITAOT package over the years to work around limitations in the former component content management system CCMS. These customizations restricted the flexibility of the DITA content, and the company would need to develop complex workflows to successfully export the content to web. XML Documentation for Adobe Experience Manager, the DITA-based CCMS from Adobe, stood out as an answer. For example, the old system required that all content needed a cover page. With just a few clicks, they can output content to PDF or publish to web. Web content is searchable, allowing customers to easily find content that they're looking for. It's also responsive, meaning that no matter how customers are viewing web content—on a desktop, tablet, or mobile phone—the manual is clear and easy to read on any size screen. It took much less time and effort to set up compared to our old system." Individual writers would sometimes reuse their own content by copying sections from DITA content that they had previously written, but there was no central way to share reusable DITA content among writers. The lack of reusability increased the amount of time writers spent rewriting content, but it also increased translation costs by forcing the company to translate similar phrases multiple times. The company identified several categories of content with high reuse potential, including governed warnings, global content such as company logos and customer support numbers, and content that remains the same across multiple products or models.

Writers use DITAVAL and condition presets to make each piece of content filterable and easy to find for all writers. If the company changes a contact phone number, for example, it simply changes the phone number in one location, and it can propagate that change to all of its manuals.
