### c52 gearbox manual

Please help improve this article by adding citations to reliable sources. Unsourced material may be challenged and removed. This will fit most Toyota A engines. Similar to C52 but apparently stronger. Transmissions with an identification code ending with 12C are LSD equipped. Code ending with 12A are nonLSD. A Limited Slip Differential is offered only in the Levin BZR and Trueno BZR. Retrieved 7 January 2017. By using this site, you agree to the Terms of Use and Privacy Policy. The video is not perfect, but it's a great reference for anyone wanting to overhaul and assemble their manual transmission. I suggest you have parts diagrams from the Toyota BGB big green book, i.e. workshop manual or sites like toyodiy or toyotapartscatalog.com handy while watching this video. Here's a link to the parts diagram of this transmission. Here's a list of everything replaced: All synchros, 5th speed gear, 5th gear coupling sleeve, 5th gear selector fork, all synchro springs, 1 missing synchro key, rear bearing retainer plate, input and output shafts front and rear bearings, differential tapered roller bearings, all seals, clutch thrust bearing. Probably forgot something. Problems addressed with the rebuild: 5th gear popout and hard shifting from 1st to 2nd gear. In the beginning of the video there is a stupid crop, it lasts just for a few minutes so please be patient. 0 comments share save hide report 100% Upvoted This thread is archived New comments cannot be posted and votes cannot be cast Sort by best no comments yet Be the first to share what you think. When drivers start, they will have "gear drive," avoiding a moment of sluggishness and wasted power. It moves from gear to belt drive after launch, so the belts can be retuned for higher gear ratios, increasing the range. Reducing the torque load of the belt meant that the belt and pulley could be smaller, increasing shift speeds. The transition is a little awkward for some drivers, but one gets used to it. The new gearbox is also 15 pounds lighter at 88 pounds and shorter by 0.94 inches. It kept the four speeds and lockup torque converter; the latter, developed originally by Chrysler some years earlier, provided a direct mechanical link between engine and rear wheels, avoiding the waste of using oil to transmit power. Both A240E and A245E transmissions were electronically controlled hence the "E" and quite advanced for their time.

While the C1 accumulator piston of the A240E was activated only by the spring tension, the C1 in the A245E was activated by the spring tension as well as the back pressure, as were C2, C3 or B2. Lengthening the stroke of all accumulator pistons reduced the shift shock." Diagnostics were the same for the two transmissions. We will determine the true start and end dates later. The C52 had launched in the 1991 Corolla with the 4AGE engine. The same transmissions were used in other cars with the 4AFE and 7AFE engines. When used with the 7AFE in the Corolla, a turnover device in the clutch pedal assembly reduced pedal load, unless drivers had antilock brakes or the theft deterrent system. The mechanism for cutting load was an overcenter plate and a tension type coil spring. The construction was updated but both had similar operation. The detent shaft in type A was replaced by the shift lever in type B. In Good working order, testdriven prior removal.
