In the diagrams, represents the path of mechanical drive; where a signal name accompanies the symbol, the arrow indicates the direction of the electric signal. Please wait. F17 1.2.2.2 Turning Off the Power Switch 00088709 Be sure to go through the shutdown sequence whenever turning off the main power switch. How to Turn Off the Main Power Switch To turn off the main power switch, be sure to go through the following steps to prevent damage to the machines hard disk 1. F118 Advise the user that the breaker switch is fully to the ON position. If it is found between ON and OFF positions, it must first be shifted to the OFF position and then to ON. Do not use warm or hot waster; otherwise, the toner will jell and fuse permanently with the fibers of the clothes. Also, do not bring toner into contact with vinyl, as it tends to react. The site must not be near a water faucet, water boiler, humidifier, or refrigerator. Take care so that the machine will not be installed near a vent from which air is taken into the room. 7. If it is difficult to take out the slope plates, move the main body to the trailing edge of the skid. Remove foreign matter, such as an adhesive of tape on the feeder belt. F218 5 Close the fixing delivery assembly 2.2.5 Checking the Corona Assembly and the Dust proofing Glass 00087948. If the machine fails to be connected to networks, any of the following causes is probable. a. Connection failure between networks and the machine b. Delivery Tray 1 pc. Magnet Catch 1 pc. delivery roll 2 pc. E ring 1 pc. 2.5.2 Turning Off the Host Machine 00094207 Turning Off the Main Power When turning off the main power, be sure to go through the following in strict sequence to protect the machines hard disk. When attaching the shift tray or the finisher to the machine, however, do not perform the following steps. 1 Open the front cover, and draw out the fixing feeder unit. RS Tightening Screw M4x10 1 pc. F288 10 Attach back the right cover upper detached in step 1. <http://fotoiaav.com/userfiles/dna-free-manual.xml>

Use it to set the interval of automatically cleaning the pre-transfer charging wire in terms of the number of prints.

COPIER>OPTION>BODY>TR-SP-C1

(switching over the transfer/separation output value for pickup from the right deck)

COPIER>OPTION>BODY>TR-SP-C2

(switching over the transfer/separation output value for pickup from the left deck)

COPIER>OPTION>BODY>TR-SP-C3

(switching over the transfer/separation output value for pickup from the cassette 4)

COPIER>OPTION>BODY>TR-SP-C4

(switching over the transfer/separation output for pickup from the manual feed tray)

COPIER>OPTION>BODY>TR-SP-MF

(Use it to switch the transfer/separation output for pickup from the manual feed tray.)

COPIER>OPTION>BODY>TR-SP-DK

(switching over the transfer/separation output value for pickup from the side paper deck)

As necessary, switch over the transfer/separation output value for pickup from various sources of paper by way of correcting various faults:

0: normal (default)

1: prevent re-transfer

2: prevent separation fault

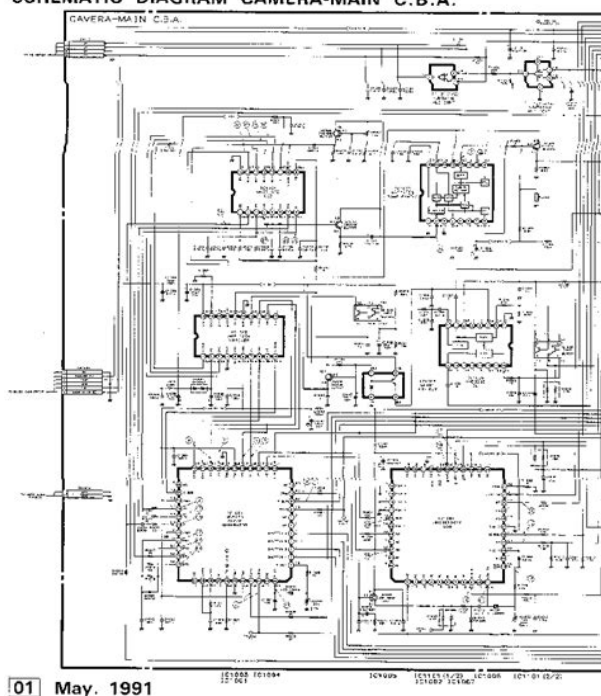

3: prevent transfer fault

11 Connect the power cable to a receptacle. 12 Turn on the main power switch, and check the indication requesting for setting the control card. Refer to the Installation Manual included with the NE controllerA1 for various settings, operations check, and points to note. 1 Remove the upper cover of the controller refer to the Installation Manual. Stepped Screw M4, approx. 31mm in length 2 pcs. Stepped Screw M4, approx. 33mm in length 2 pcs. Cassette Stay FB27052000 1 pc. Screws M4x6 XB12400609 6 pc. 2.9.2 Turning Off the Host Machine 00094371 Turning Off the Main Power When turning off the main power, be sure to go through the following in strict sequence to protect the machines hard disk 1. T43 Partition Description FSTDEV Collects compressed image data. When the machine is started, the CPU on the main controller PCB reads the system software from the HDD according to the instructions of the boot ROM boot program, and writes it to the image memory SDRAM of the controller PCB. To avoid such damage, the machine is provided with a shutdown sequence. 4.4.2 Flow of Operation 00093796 The following diagram shows the flow of shutdown operation. Printer unit output image processing block Processes image data for output to the printer unit. image memory program temporary storage SDRAM. Printer unit Main controller PCB Image processing block for printer unit SDRAM Data expansion Data rotation Resolution conversion Ethernet port. Start up the machine in safe mode i.e., while holding down the 2 and 8 keys, turn on the main power. The following shows the speeds at which the mirror base is moved speed ratio Magnification 100%. J601 J206 Inverter PCB Reader controller PCB scanning lamp Activation control. Timing of Control 1. The machine also makes sure that the output voltage in the absence of incident light is of a specific level offset correction. F537 F535 When detaching the copyboard glass, take care not to touch the white plate attached to its back.

F544 When detaching the copyboard glass, take care not to touch the white plate attached to its back. Soiling can cause lines in the image. If soiled, clean it using lintfree paper moistened with alcohol. F547 5.4.3.4 Removing the Left Cover upper F5117 5 Fully open the ADF. Be sure to have the following nearby when replacing the scanner drive cable mirror positioning tool 5.4.12.2 Removing the Copyboard Glass. F5131 5 Fully open the ADF. F5155 2 Arrange the mirror positioning tool so that it is ready for use in the machine by changing the pin position; FRONT. The control

mechanism takes place in the motor speed control block on the DC controller PCB and the reference signal generation block. The following is an item associated with the preexposure LED control system 1. E8210001 The reading of the drum cleaner thermistor is 55 deg C at least once, causing the machine to assume that the inside of the cleaner is clogged with toner. If you must remove the developing assembly, be sure to exercise care not to damage the developing cylinder. 7.10.1.1 Removing the Primary Fan Duct When the developing assembly is outside the machine, be sure not to mount the developing assembly locking assembly. F768 When you have mounted the pretransfer charging assembly, be sure to execute wire cleaning in user mode. F7161 F7163 7.10.11.3 Removing the Hopper Stirring Motor. If you must remove the developing assembly, be sure to exercise care not to damage the developing cylinder. When the developing assembly is outside the machine, be sure not to mount the developing assembly locking assembly. F7179 Do not leave fingerprints or oils on the surface of the developing cylinder. When mounting the blade, place paper on the developing cylinder first to protect the developing cylinder. Start key ON or PRINT setting recognized INTR PRINT Sensor N1 Jam check Error. At this time, the lightblocking plate leaves the lifter sensor, causing the cassette lifter motor to go on and the lifter to move up.

SCHEMATIC DIAGRAM CAMERA-MAIN C.B.A.

<https://congiendis.vn/vi/4-tec-traxxas-manual>

The result of identification is communicated to the controller unit. The manual feed pulloff roller is operated by the drive coming from the main motor by way of the manual feed pickup clutch CL3. When the clutch engages, the holding plate solenoid goes on so that the manual feed holding plate moves up. While all this goes on, the lightblocking plate leaves the lifter sensor, causing the deck lifter motor to go on and the lifter to move up. The lifter stops to move up when the lifter sensor detects the surface of paper. When printing on the 1st side is done and the leading edge of paper reaches the delivery assembly jam detection sensor PS4, the reversing flapper solenoid goes on. The 1st sheet is moved to the reversing assembly. The 3rd sheet is picked up. F833 4. The 1st sheet is moved to the duplexing feed assembly. F834 5. The 2nd sheet is moved to the duplexing wait point.

The 4th sheet is picked up. F837 8. The 7th side is printed on the 4th sheet, and the 1st sheet is delivered. F838 9. The 6th side is printed on the 3rd sheet. The 4th sheet is kept on hold at the duplexing wait point. F841 12. The 3rd sheet is delivered. F842 13. The 8th side is printed on the 4th sheet. F843 14. The 5th sheet is delivered. F845 8.8.7 Outline of Horizontal Registration Position 00093189 T819 Paper position detection duplexing horizontal registration sensor PS31 Timing of start of after duplexing paper sensor PS34 goes on detection Source of drive duplexing horizontal registration motor M16 Position measurement by controlling pulses of duplexing horizontal registration. T820 Delivery mode Operation mode Faceup making multiple prints of a single original for the following, when the manual feed tray is used as the source of paper with a default paper size selected and paper other than plain paper used Facedone. An illustration makes a right door an example and explains it. F873 3 Open the right lower cover.

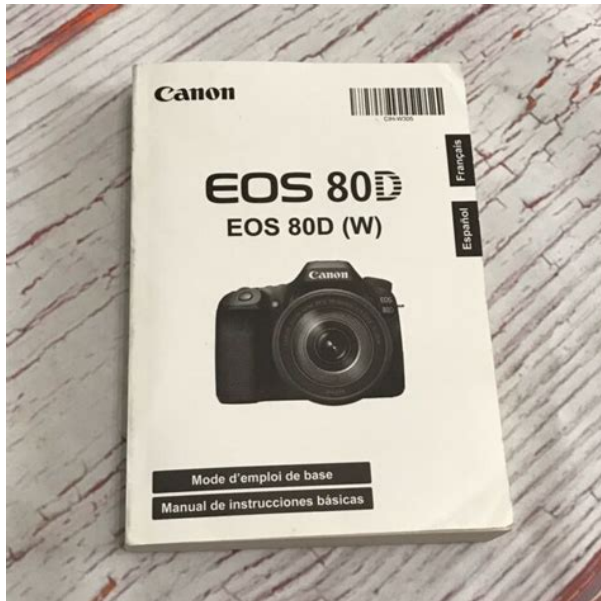

<http://garantbouw.com/images/brother-typewriter-instruction-manual.pdf>

An attempt to remove the pickup assembly without removing the deck will cause the lifter to get trapped, not holding the pickup assembly from sliding out. The machine moves the shutter to the appropriate position to suit the size of the paper and the reading of the thermistor in question. Power WMUP STBY PS53 F923 HP shutter position home position M shutter position mediumsize paper position S shutter position smallsize paper position M15 shutter motor PS53 shutter HP sensor. The cleaning web is taken up by the takeup roller when the drive from the fixing web solenoid SL9 reaches the web takeup roller drive gear by way of a oneway clutch. Use it if an image fault occurs as a result of soiling on the pressure roller. 0 normal default 1 twice as often as normal 9.3.2.2 Controlling the Mechanism Used to Detect the Remaining Length of the Cleaning Web 00093747 The remaining length of the cleaning web is detected as follows. The change, however, will not affect its performance or F949 output images. Further, the physical properties of the roller can permit its surface to start to wrinkle. When you have completed the foregoing series of steps, be sure to put back the pin in its initial location before putting the fixing upper unit back in the machine. You can damage the separation claws if you place it with the claws against the floor. F973 9.5.6 Internal Delivery Roller 9.5.6.1 Removing the Inside Delivery Roller 00094876 1 Remove the fixing feeding unit from the machine. If not, start over the mounting work. The counter readings are indicated in response to a press on the Check key on the control panel.DC controller PCB 24V or 12V Full speed signal Voltage. The following shows the various PCBs and components associated with the supply of DC power T109 Name Description. Take care not to spill the waste toner. F10123

10.5.17 Feeding Fan 10.5.17.1 Removing the Rear Cover upper F10131 10.5.19 DC Power Supply Fan F10129. F10139 10.5.

<http://ambarevleri.com/images/brother-telefax-770-manual.pdf>

20 Fixing Heater Power Supply Cooling Fan 10.5.20.1 Removing the Left Cover upper 00093874. The architecture is based on Java J2ME, i.e., Java 2 Platform Micro Edition, and is designed to enable the execution of Java applications. If possible, plan any replacement to coincide with a scheduled visit. Replace them as needed by referring to the table of estimated lives expressed in terms of the number of prints they make. The intervals indicated may vary depending on the site environment and user habit. The change, however, will not affect the performance of the roller. Also, note that the roller surface varies in color among manufacturers and the fact will not affect the roller performance. Is the density too low or too high too light or too dark. Is the halftone End. To check a printer PDL image, See if the density of the halftone area represents the original data properly. Is the NA3 Chart in text mode. Perform the instructions Is the white under "Checking for background foggy. Fogging" on the printer side. Is the image better. Switch off and on the main power switch. Further, be sure to clean the groove in the blade support plate before mounting the blade, as toner or the like in the groove can start to bend the blade. Fixing roller Pressure roller Inlet guide Solenoid F1357 The inlet guide is in low position when the solenoid SL1 goes on. Refer to the color of its round label to make sure that the ROM is positioned correctly. When mounting the solenoid on its own, be sure to secure it in its original position. F1374 F1371 2 Set the cassette 3 cassette 4 in the machine without paper. It must not be near a source of fire, and must not be subject to dust. T141 Notation Name Description Remarks developing cylinder clutch drives the developing cylinder registration clutch drives the registration roller manual feed pickup clutch drives the manual feed pickup roller.

If you have initialized the RAM on the reader controller PCB, enter the value indicated on the service label. BIAS adjustment range 0 to 600 default 180 Use it to enter an offset value for the highvoltage unit. If normal, its corresponding character will appear on the touch panel. The setting will be initialized when the OK key is pressed. The execution of this item will reset the data kept by the main controller, DC controller, and reader controller. Procedure 1 Select the item. 2 Press the OK key to generate a printout. PREEXP Checking the preexposure lamp LED. 1 Select the item to highlight. 2 Press the OK key to execute various operations for several seconds. Procedure 1 Press FANCHK to highlight. 2 Type in the fan number using the keypad. 3 Press the OK key. 4 Press FAN on to check the operation. A higher setting will cause the machine to be more sensitive to finer particles of dust. If a received image has a fault, use this mode to find out if the fault is in the data or in image processing. The following table shows the various system software used in conjunction with the machine and how they may be upgraded. T171 Type Type of system software. The information needed for partition settings is stored under HDFS of the iRXXXX. Or, turn off and then on the machine to end the work. If you have formatted all partitions or formatted BOOTDEV, be sure to download System newly. Otherwise, E602 will occur when you turn on the main power. 1714. Unlike previous iR controllers, however, there is only one type of system software. Previously, one type supported NetWare while the other did not. There is now only one type for the machine supporting NetWare. 17.4.1.2 Downloading Procedure 00095917. F1721 4 If you want to start another downloading session, see the appropriate instructions. 5 When you are done with downloading, turn off and then on the main power. 6 See the upgrade status indicated on the control panel.

F1728 4 If you want another downloading session, see the appropriate instructions. 5 When you are done, turn off and then on the main power. 6 See the status of upgrading indicated on the control panel. This function is used in conjunction with the PDF Generation Expansion Kit. 17.4.3.2 Downloading Procedure 00095919 You can run a downloading session in either normal or safe mode. When a message appears asking you to turn off and then on the switch, turn off and then on the main power. When a message appears asking you to turn off and then on the switch, turn off and then on the main power. When a message appears asking you to turn off and then on the switch, turn off and then on the main power. When a message appears asking you to turn off and then on the switch, turn off and then on the main power. F1744 4 If you want to execute a different downloading session, see the appropriate instructions. 5 When you are done, turn off and then on the main power. 6 See the status of upgrading indicated on the control panel of the machine.
