I was not able to fax out nor receive any fax even though I could hear it dial. Funny thing is, once in a while, when I turn on the machine it prints out a MEMORY CLEAR REPORT. So, obviously it has no problem printing. The text of the REPORT is very clear and sharp. Any thoughts anyone Thanks in advance. So turn your FROWN 180 degrees Back to my original question that appears to have had no replies. Anyone know what is causing my Rec. I went into test mode and all the sensors appear to be in order. I assume its a false signal. Anyone know what the most likely problem is. Thanks If someone has user manual, PLS copy or. I need new configuration this fax. Thanks I have an old Canon Laserclass 5000 fax and am looking for the 0.5 memory upgrade. I know that this fax was discontinued in 1996 and now they are no longer making replacement parts for it. I called the 800 number and they are looking to see what they can do to help me. Again, thanks for the number. Mary Anonymous It says SUPPLY REC. PAPER.... what does this mean. Please help. Sometimes it also thinks it has the wrong size paper even if it doesnt. Anyway, to reset these lights pull out the paper tray and reinsert it and then open the front of the machine and close it again. <http://nuptini.com/userfiles/nuptini/infors-multitron-manual.xml>

- 1.0.

That frequently resets the message. Anonymous It is either empty or is not inserted correctly. Fill it up with paper, or if it has paper, open and close both paper drawers. Or maybe the sensor for same went dead. Didnt know it existed. Do you have a manual available Anonymous I send out legal documents occasionally and need proof that the fax was sent and received. Keep up the great job and I too would like to get the PDF for the manual Keith. Thanx for all your help Paper Jam error and warning light flashing. Ive checked all the sensors and cant find a problem. Has anyone had this before that can steer me in the right direction. I have the manula but the troubleshooting and schematics leave a lot to be desired. I doesnt even tell you how to get to the PCNT board or the paper sensor board. I have a Canon LaserClass 7000 given to me by my dad. He said it printed about 20 copies just fine and then started giving an error. I cant see that its a power error since it worked fine until 1 day it started giving this error at a specific number of copies cant tell you how many since I cant print any reports. Any help would be great. I have the Instruction Book and it doesnt say anything about fixing a User Access Lock. Thank you in advance. Brian Did you get any ideas Thats the only part that isnt involved in receiving faxes. In fact, I have that error right now, and it is saying 330, but I am still going to put a fuser into it, and it will fix it, because that is the only thing that goes wrong with these machines. Ive replaced 10 fusers in 5 years on 3 machines. I am in the process of moving to Columbus, Ohio next week and once I get there and get settled in. I will PDF the manual and put it online somewhere. I just dont have time to do it right now. So if you want the manual, email me AFTER April 21 or so. Please and thank you. Or if you are really in a hurry, you can buy it direct from Canon USA by calling 7325217230. Paul Good luck. Hope the fuser does it for

you. <http://dylogistics.com/userData/board/infors-ht-multitron-manual.xml>

After I picked up a machine on eBay and swapped the PS out of it, machine worked fine. Still can any one please tell me if I need to replace the power supply and how to do it. Thank you! Anonymous Keiths error codes above work for it as well. I suspected it was a fuser error, but the test above confirmed my suspicion. Its amazing the amount of knowledge contained in our archives. I tried googling the error, but of course it sent me right here. No wonder I was getting white paper every now and then when I had yellow paper in the main tray. Thanks to all for sharing. Don't live in an old 1924 farm house, and the outlets here are all junk. I had nabbed an old piecedtogether extension cord from my husbands shop to plug this in to the working outlet across the room. Thanks to the heads up about the power supply, I went back to all of the connections, as well as the outlet, and jiggled and reconnected them, including the cord coming into the machine. Worked like a champ!! Printed perfectly. You are GOOD!! Thanks for any direction! Adobe wont take it, apparently the file is too large. I get to about page 150 and then Adobe crashes. I just dont have time to mess with it right now. I am going to get Adobe 6 maybe it will take it better that way. Our company moved this month and the box with all the manuals in it is lost. Can someone help me Thanks! Select DATA REGISTRATION, 1 USER SETTINGS, the sub routine is 10 VOLUME CONTROL. Under this heading select either 1 CALLING VOLUME, 2 KEYPAD VOLUME, 3 ALARM VOLUME, 4. LINE MONITER VOLUME. The selection is from 08 4 is the optimum setting To enter each routine press the SET key. I do have the User Guide for this unit. If however you need a confirmation for that particular document press the PROGRAM key on the key pad before entering the telephone number, answer YES when prompted. There will be no binding and they will be single sided. I recommend you use a 3 hole punch and then put them into a ring binder. The pages as I sent them will be lose.

This includes postage within the USA. However, it has taken me the better part of three days to copy it, clean up the copies and make a set from which good quality copies can be made. Then there is the expense of driving to the post office, etc. So for that I think I am entitled to a small profit. If you want to buy one, email me and I will send the information to you on how to pay. You can mail me a check or money order, or I also accept credit cards through 2Checkout.com. But there is still one thing I cant figure out. In our company we have to dial 9 before we can dial any number out of our building. It was programed in them before we moved, but now its not. So, in other words, we have to dial 91 xxxxxxxxxx. Can anyone tell me how to program or what page this programing is on Thanks! Or any one else who can help me with this piece of crap! I use the same procedure on our Canon 9000. Thanks for your help. Vin Anonymous Using the program keys in the following sequence DATA REGISTRATION SET scroll to TX SETTINGS SET scroll to ERASE FAILED TX SET select ON SET to exit STOP. Any Other suggestions Anonymous Is there anyway I can fix this Now all we are getting is TX report with no copy of the page. The second issue we have now is that previously, we could put a fax in, dial the number, the machine would scan the documents storing it in memory then would dial and send. Now it is waiting until the other fax picks up and then scanning the pages at the speed of transmission. Sorry if these questions have already been asked, by any hints or suggestions would be appreciated. I cant find it. Then when you try and print the fax that has been stored in the memory it will only print the first page then it starts beeping and the light starts flashing. Does anyone have any idea how we can fix this. Any ideas would be appreciated. Thanks. You may have a memory problem if this unit has a ROM below USA05, or maybe a bad fixing assembly, or the wrong paper loaded in the Auxillary Cassette.

Professional help is advised. Any ideas how to turn whatever that is off. Im also interested in getting ahold of a manual. Thanks I would like the fax to receive automatically only on the double ring, however it answers all calls after 2 rings. I have tried to follow the instructions in the manual to no avail. I am trying to do the same but have no manual. Thanks Anonymous Thanks for any help. The main tray and the one under the output tray. Make sure there is paper in both of them. Thanks in

advance. Thank you in advance. texmikk Weve been having a few issues this week with someone using our site as a source for manual sales. We had to crack down because of complaint emails. As to your problem, Ive never seen a controller board give a false paper jam signal. I suppose its possible, but not likely. Is the engine running when you power it on or does it just go directly to paper jam error? I dont hear the engine cycle. As I sated, I went through the sensor test in the test mode and it appears that the sensors are working. Paper light blinks and goes out when pushed back in but the MLT sensor status does not change. Is this normal I have never worked on these before. Mostly Pitneys or Imagistics. Im not even sure how to disassemble to get to the boards, sensor etc. I tell you what, Ill upload the manuals to my website and put a download link on the board here and if someone wants these manuals, they can just click the link and download them right then. Ok Thanks I just tried it again and it works. I could have sworn it didnt last time I checked it but nonetheless it still gives the rec paper jam error. The other sensors only come into play after a print job is sent. We already have that manual, if only our webmaster would upload it. Replaced the fuser to no avail. If not so, replace the PSU. The voltage reads about 20 VAC. I have not tried this yet for recieving a fax after it has printed but it might alarm for that also.

My Fax makes enough noise when the fan comes on to let me know I recieved one. MarkW The manual has no reference to it and I didnt see it marked on the outside of the machine. So Im not sure what Im looking for here. Powered up with the error displayed, Im getting .83VDC Does anyone know what the normal signal or voltage this ACVIN signal is supposed to be. Im trying to determin if the PSU board or the PCNT board is deffective. Thanks Mike Still looking for an answer from my post above regarding the AVVIN signal. If the signal from the PSU is not right then you would most likely suspect the PSU board. I repaquired 2 Canon LC7000 Fax machines yesterday. He said most capicator testers only accurately test the larger or other type of capacitors. Jim Anonymous Ill try that. Sounds like you have done this a time or two. All I have is the Service manual and parts manual in PDF. I dont have the user manual in PDF Its working great. I appreciate it much An Lexmark x6170 in another. The Canon cant fax the Lexmark, however the Lexmark can fax the Canon. The Canon errors out with Transmit failure. They both work faxing and receiving on all other machines anywhere. There is no phone line issues. It appears that they fail in the handshake phase as the line gets answered, but the the error occurs after a timeout period elapses. I am in Tech Support and have verified that both machines are seemingly in good working order. Very weird. Any assistance is appreciated. Thanks in advance! Any ideas Thanks! You can order at www.stepbystep.nl email or eshop Anonymous Thanks for the great info. Thanks! briank405 Where did you get the capacitors. Do you have a PDF of the Service and Parts Manual I have the 235 page Operators Manual, which frankly isnt much help here. Id like to have an idea of where to go to find C32 before just ripping things apart. Its a good fax, and Id hate to trash it without trying to fix it. Try that if it works. If not then just get a used replacement.

ArthurDennis Brown Maintenance Engineer KPTM TV Omaha, NE. 68127 I replaced the caps and IT LIVES. I would also have to answer the phone quickly in order to beat the fax answering. Nothing I did seemed to make it work properly, so I leave the fax on a switch and only turn it on when Im expecting a fax. Chris Try it again, mine is set to double ring and works PERFECTLY. I have NO manual you see. JT Replacing C32 fixed the problem. It continues even though it receives and copies fine. Any Ideas on what is wrong with it. Where can I find parts for it too THanks! Recently we had a power outage and now we can send faxes but cannot receive them. Any suggestions Is there a separate recieving modem that could have gone bad? I have the instruction book but not a repair manual. Can you email me the repair manual? The elimiate the problem of a MEMORY FULL prompt, in the DATA REGISTRATION mode scroll to TX SETTINGS, and select ERASE FAILED TX, by choosing this setting the fax transmission will be automatically erased after three unsuccessful attempts. LC710 Error E004. Faulty fuser, replace Fixing Assembly RG55559000 You made me look like a HERO Thanks again ! Anonymous I was wondering if I cold have one of those user manuals

emailed to me please. It would be much appreciated as I need to fix my fax pronto!! Thanks in Advance, DesireeUnplugged and replugged everything, that didnt help. Rings busy when I tried sending from another fax machine. Help.If you plug in the wrong connection the hand set side, it will not work It will ring, but never pick up. unknown Open the door on the left side. Remove the 2 screws holding the black plastic exit guide in. The fuser is behind it held in by 3 screws.I cant get it to copy or print any kind of report. What now Appreciate any info.Put a new one in and it still didnt work. Put another new one in and bingo, all is well. Saved me from buying a new fax. Kudos. Anonymous I was lost before thinking I needed a manual to survive with the LC 7000.

If everyone would just READ the thread before posting, 99\% of the questions would be answered immediately. Granted it is heavy reading but worth it. Mine is printed and handy.Printer seemed to think so and its working just great. Even though its my forum, I can say its the best resource for printer problems in the world.Scott The memory of this unit is full of faxes that did not go to the recipient. Under TX SETTINGS, turn on ERASE FAILED TX, this will erase any future failed transmissions after 3 attempts. To erase those already in the memory select MEMORY REFERENCE, scroll to DELETE, clear all unwanted failed Txs Having a User Guide solves most problems. You can store and print frequentlyused forms directly from the device, or distribute your documents electronically to preset destinations with just a tap of the button. This maximises scanning efficiency without any compromise in scan quality. Digitize your paper document and send them to shared folders for convenient data access and management. Print jobs will be held safe in memory until authentication code is entered into the device. Just tap to print. Optional high cartridge option is also available to cater to high volume printing needs. Good opacity eliminates showthrough with double sided copying and printing. This paper enables excellent runability and is designed for broad range of home and office applications for customers where the environment is of vital importance. Produced using 100% Eucalyptus fibre offering high bulk and opacity. Ideal paper for your daily high intensity printing needs. Canon Tints provide the perfect solution for every kind of business applications. For prints that are impressive, eye catching and vividly expressive. Suitable for copiers, laser printers and inkjet printers. The high degree of whiteness and satin gloss gives colour prints a distinctly vivid appearance.

Excellent running characteristics allow processing from the paper tray of all colour copiers and laser printers making it ideal for business applications. Please refer to individual country and region websites and respective sales offices for product availability. Please try again.Please try again.Upon activation your printer measures ink levels and places smart reorders when you are running low. No subscription fees. Cancel anytime.In order to navigate out of this carousel please use your heading shortcut key to navigate to the next or previous heading. Register a free business account Please try your search again later.Keep your documents in the right hands with secure print.You can load 250 sheets in the standard paper tray, 100 sheets in the multipurpose tray, and 550 sheets in the optional paper tray AH1. The Canon PRINT Business app also allows you to scan from the printer. To calculate the overall star rating and percentage breakdown by star, we don't use a simple average. Instead, our system considers things like how recent a review is and if the reviewer bought the item on Amazon. It also analyzes reviews to verify trustworthiness. Please try again later.I have my self respect intact.. and a printer that works. Setup by the average consumer, ill advised, if not psychologically risky....And who the heck logs into a printer to configure it with a user number and a four digit PIN! I know, Im a home user and dont need the absurd complexities of this. As an office worker Im an electrical engineer and computer guy I would just walk past this thing and find another printer in the office to use because I have far less time to do a simple task while working than I do at home. Everytime I print the printer beeps telling me to select the only printer paper tray I have available before it will print. I have selected Auto and Tray 1 in the printer config in print dialog and every bleeping time I have to select it on the printer. Every morning the printer wont print.

The only way to get it to print is to uninstall and reinstall it from the OS. I have confirmed the IP address is not changing over night. There is absolutely no excuse for how awful this thing is. Its like Rube Goldberg designed it and Escher implemented it. UPDATE OMG do I truly hate this printer. It is beyond stupid. Every time I print I have to go to the printer and select the only tray available on the touch screen before it will print. Because the print isnt certain I actually want to use the only paper available. This thing is complete garbage. And every time I do anything with it, it has to print a transaction log. This thing is so wasteful, time consuming, and stupid Im going to throw it out and get a printer from a company that actually knows how to make a printer that. I dunno. printsIts fullfeatured, 3100 pages cartridge. So its like at least 2 extra cartridges is included in the price if you compare with any of the competitors. Its unbelievably fast. It has duplex multi page scanning its when you give it stack of paper it automatically scans both sides of each page and nicely places it into a PDF file, for example. Its silent in the sleep mode, unlike many HP competitors that have highpitched noise while in the sleep mode. This printer is too good to be true. In fact, its so good, that youll get greedy. When I compared the true black document printed on this printer and on a very good inkjet with print price per page about 10x I didnt know which one is better and at some point I confused the two copies. I couldnt figure out what printer printed what copy. And then. the greed. When you print PDFs, some of the colors are not pure black. This is the nature of it. The toner is black or no black. There is no even gradation of the gray. Meaning that even gray has to be simulated from the black or absence of black. It has to be said that inkjets prints are also pixelated.

But perhaps because pure black is also pixelated you care less about the not pure black ones. Laser printer gives you so much sharpness for the pure blacks that you start noticing pixelation on the not pure black colors. Canon is this really the best you can do Sorry, we failed to record your vote. Please try again Sorry, we failed to record your vote. Please try again In order to navigate out of this carousel please use your heading shortcut key to navigate to the next or previous heading. By parts code you can check what other devices it is used. You can print your Parts List or export to Excel to further work with it. We only help you to create your parts list for request from your suppliers. Add your headers and comments. Canon Laser Printer and office MultiFunctional Device products do not use the IP stack modules from either Treck Inc. With this in mind, we recommend that in environments where wireless security is a concern, such as a public location, Canon equipment should always be connected to infrastructure

WiFi deployment. We take security seriously we are updating the WiFi security configurations across our products to help you remain secure and any update will be published on these pages. Canon would like to thank REDTEAM.PL for drawing our attention to the changing nature of password security and its impact on the market. This builds upon the device logging capability allowing connection to an existing security information event management SIEM or Syslog server. As it has become prevalent to transfer images from a camera to a mobile device via WiFi connection, we will implement firmware updates for the following models that are equipped with the WiFi function. We strongly recommend you run this fix on your system as soon as possible. Should you require further information regarding this advisory, please contact your local Canon office, authorised reseller or Canon support representative. If you notice any suspicious activity, please report these immediately to your account manager and IT department.

For information regarding the impact of these vulnerabilities on Canon products equipped with fax functions, please see below. However, we have not identified any risk of malicious code being executed via the fax circuit or risk to the security of information saved on these devices. These vulnerabilities may allow an attacker to gain unauthorised access to areas of private cached memory. They are CVE20175715, CVE20175753 "Spectre" and CVE20175754 "Meltdown". Though there is currently no known way to exploit these vulnerabilities, countermeasures are being prepared so that customers can continue to use our products without concern. Though there is currently no known way to exploit these vulnerabilities, countermeasures were put in place by end of February 2018. Customers can continue using our products reliably. We take the security of our customer information seriously and its protection is our utmost priority. This vulnerability allows an attacker to intentionally intercept the wireless transmission between the client terminal equipped with WiFi functionality and the access point the router etc. to perform potentially malicious activity. For that reason, this vulnerability cannot be exploited by anyone outside the range of the WiFi signal or by anyone in a remote location using the internet as an intermediary. We also recommend you take appropriate measures for such devices as your PC or smartphone. For information on the appropriate measures for each device, please contact the device's manufacturer. However, connecting products to a network introduces the possibility of such security issues as unauthorized access and use by malicious third parties. Below we have outlined a number of security measures to ensure customers can continue to use their Canon products in a more secure way. No Canon devices were tested in the research. We take the security of our customer's information seriously and its protection is our utmost priority.

Our MFD Hardening Guide explains and advises on the best configuration settings for secure implementation. Please note, the information is only available in English. By holding ISO 27001, Canon Europe can confirm that its security processes from development to delivery have been externally assessed and have been 3rd party certified to an internationally recognised standard. It covers all aspects of information security from risk and audit management to product security and incident management. Please also include an email address and telephone number so we can contact you if we require more information. As part of this commitment, we invite security researchers to help protect Canon and its users by proactively report security vulnerabilities and weaknesses. We work hard every day to maintain and improve our systems and processes so that our customers and partners can communicate and shop with us safely online. However, should you find a weakness in one of our IT systems, we always appreciate your help. Our policy document explains the requirement and mechanism related to Canon IT System Vulnerability Disclosure that allows researchers to evaluate Canon IT system to discover any vulnerability in a safe and ethical manner and report it to Canon Information Security team. Please visit our Support pages for help with any other issue. When properly notified of legitimate issues, we will do our best to acknowledge your email, investigate the issue and fix them as quickly as possible. These websites are designed to look like our official Canon Store and we believe they are not legitimate, aimed only at confusing and

deceiving our customers into sharing personal and financial data. We advise our customers to be vigilant when shopping online with Canon and other retailers. Should you find any errors, please help us by reporting it [here](#). We delete comments that violate our policy, which we encourage you to read. Discussion threads can be closed at any time at our discretion.

How do I clear it Login to post How do I get rid of this Hopefully the fax will be outputted and the message will go away. Good luck. It says E004. I know it's the faxing unit failure. How do I go about fixing this error FAX Machine details Canon Laser Class 710 Super G3 High Speed. We put the cartridge in and out about 10 times and the same error message keeps flashing. Answer questions, earn points and help others.
