Childs 3.0 out of 5 stars Seems to play all of the files in order. You can skip ahead one file at a time; I havent found a way to navigate directories. It remembers the last file played and starts up from there when you plug it in.

At first, it would always start broadcasting on 87.5, so it took about 20min every time to skip ahead one channel at a time to a useable frequency. Lately it has stayed on the last channel used, but still displays 87.5. Is it broken or did I find an undocumented feature. No way to know. If you have an old radio with no inputs, this will do the trick for next to no money. Shut up and be thankful it works at all. The one small flaw is that it doesnt retain the station I usually want it on once I disconnect. This does go on stations beloww 88 FM and thats important. I tried another brand that started at 88 and from there up theres a lot of regular FM that bleeds in when using these things. One other thing thats a huge plus in my book is that this uses regulat connecting ends between it and my Ipod. The problem Ive had with other units was that the connector to the unit was smaller that the connector to the Ipod and finding replacement connectors was near impossible. If these go bad theyll be easy to replace. I mean, showed up with a Chinese address on it and Chinese postage. no middle man. Very cheaply made Im not shocked. The connection isnt great, but its passable. I dont think that the USB port allows me to charge my phone as Im using it as an MP3 player, or at least isnt charging it consistently. Took FOREVER to show up almost a month. Overall not the worst purchase Ive ever made, but not the greatest either. I contacted Crazy Cart who advised to replace fuse both I and Radio Shack looked at fuse and noticed its fine. But I bought new fuses anyway. Still didnt work. I contacted Crazy Cart again. Let them know that I even tried it in different vehicles. They promptly

shipped out a replacement. Bravo Crazy Cart for being a good company. The new one came and worked just fine, as advertised. I would have gave four stars had it worked the first time. It isnt Crazy Carts fault the transmitter was defective. I gave three stars to Crazy Cart for standing behind their product.

Changed my review to 3 stars because it didnt last long. A few months later it stopped working. The cigarette lighter adapter broke inside rendering it useless. Im glad it was cheap. You get what you pay for I guess And as long as you have good speakers there shouldnt be much static. U can use your mp3 player or a sd card which I prefer to store the music. All n all I got a good deal. My experience with them was there can be a lot of static in the output. By moving the wire and or the MP3 player around however, the static can be eliminated. I tried it with two different IPods. If the wires or player are accidentally moved, there can again be static. If you find the exact spot for the player and wires however, the sound is good. For the price its ok. More information We hope you will enjoy it. It also features a USB port to charge your devices. It only takes a couple of minutes and it will help you to enjoy your device with maximum performance. Do not use corrosive nor abrasive cleaning products. All reparation should be done exclusively by Energy Sistem Technology, S.A. qualified staff. In order to turn the device off, just disconnect it from the outlet or turn your car off. Once you have identified the Car Music Transmitter Bluetooth on your device, select connect. It will intermediately connect without codes. To synch again with the last device it has been paired, just turn the Car Music Transmitter Bluetooth on and it will automatically synch. To ensure a proper reception of the signal, both the transmitter and the receiver must be set in the same frequency. First, search a free frequency with the radio in your car. You will be able to easy detect a free frequency as they are those with no signal or a poor quality signal. When you find a free radio signal, select the same frequency in your Car Music Transmitter Bluetooth. This can be done by pressing the FREQUENCY CONTROL button 4 and changing the frequency with the DIAL.

<http://www.efodis.com/images/calculation-for-irr-manually.pdf>

At this point you should receive the transmitted signal in the car radio. If the quality is not good enough, select another free frequency. We recommend to select frequencies between 100.0 Hz and 108.0 Hz. To do this, turn the SELECTOR 7 to increase or decrease the volume. To end the call press again the CALL CONTROL button 1 and the music will resume. This way, the device will call the last number in the call history of your smartphone. Do not connect or operate this unit, a mobile stereo, or a portable audio device while driving or waiting at a traffic signal. Park in a safe place first. If the transmitter is left plugged into the cigarette lighter socket when the car is turned off, power may be consumed from the car battery. Be sure to install the transmitter where it will not affect the airbag function, where it will not interfere with your driving and where it is out of the reach of children. Never perform connections and operations while driving your car. Turn the volume down on the car stereo. Set the car stereo to FM.
