Instead, our system considers things like how recent a review is and if the reviewer bought the item on Amazon. It also analyzes reviews to verify trustworthiness. Please try again later. Marc Morrell 3.0 out of 5 stars It works as described, and great for its price point. I don't know how long the cutting wheels will stay sharp, but for the sheets I tested, it cut neatly and didn't jam or skew. On mine, the right paper guide for the first cut was a little out of whack so it takes some effort to get the first cut in line, but this is a defect and not as intended. I can live with it. The case is very light plastic and feels a little flimsy, but for someone home printing cards it's fine. It folds up into a very compact shape for storage and doesn't require much force to turn the crank. <http://innermiracles.com/IyYz3przzWCzUUR5.xml>

• 1.0.

Note This is intended for home use. It is not a professional machine made to stand up to a lot of wear and tear. One day I decided to research what that meant and when I understood, I figured out that most of the common business card printing software didn't offer that option anyway at least the three or four that I've used and heck, when I printed full color up to the individual card edges business cards, my software I've used MS Word, MS Publisher, Avery and my printer aligned the cards properly anyway so when I cut, the cut line was always right where the colors of one card met the colors of the next card. That right away made me realize I didn't need the expensive bleed option. Remember, I'm not a pro. The only other thing that held me back by then was the choice of manual or electric. I was worried that it might take a lot of effort to cut one card with the manual version not for one sheet, but if I would be cutting 100 sheets, well.. Then, something amazing happened. I was in Office Max and I saw that the card cutter they used in their Print Center was THIS EXACT MODEL. I asked to try it and the lady was nice enough to let me get my hands on it. Lo and behold, not only was it smooth and really effortless to use, I also noticed that it was just lying on top of the desk and there was no need to get cluttered by a power cord and fuss about plugging it on and off. Plus, it dawned on me that I would never be cutting 100 sheets in my home office anyway. That would be a thousand cards and that would take me months to consume. With the manual one, I can just print 5 sheets for 50 cards every few weeks or so. So, that was the story and I ordered it from Amazon right away once I got home from Office Max. If it was good enough for their Print Center, it definitely would be more than good enough for a small office, and I wasn't wrong. These are the reflections of a nongraphic pro, those doing this for a living might have a different thought! You get what you pay for. <http://profotocenter.ru/userfiles/3t40-transmission-manual.xml>

After a while the blades inside get out of wack and cut crooked. If you are using 80lb card stock it works fine for cutting 10s of thousands of bussness cards. If your using true 100lb or 110lb cardstock 270300 gsm the cutter does not last nearly as long.Great if youre doing onesietwosie jobs, but we print 5001000 business cards at a time, so jobs can take upwards of an hour to complete with this device and weve had more than a couple knobs break on us midproject.Forget the paper cutter. This is your best bet. I use card stock purchased from FedEx office. It works well and it is the recommended thickness. Very thick card stock can dull the blades more quickly.It is simple and I use it for making gift tags out of plain heavy weight paper or business cards for friends.I just wasted too much paper trying to get a decent cut. I cant recommend this product.In order to navigate out of this carousel please use your heading shortcut key to navigate to the next or previous heading. Imported from USA.
