CAUTION If pressed for more than five seconds, it starts a manual defrost. When the inside of the case is warm, the compressor turns on. When the inside of the case is cold, the compressor turns off. 2. On medium temp cases, the fans run all of the time. The Ice Merchandiser goes into defrost one time per day and lasts for 40 minutes. At the end of the defrost, the low temp doors may fog on the inside. Product temperatures within the case will not rise above acceptable levels, however. A typical defrost lasts one hour. Your medium temp case has two or three defrosts programmed per day; one at 800 AM and one at 800 PM for two defrosts, and 400 AM, 200 PM, and 800 PM for three defrosts. If the alarm sounds during this time, please allow an additional onehour recovery time before calling for service. If the alarm sounds outside of the above times, please review the following checklist. If you ve checked all of these items and the case still does not work properly, submit a service request. Cases with electronic controls a digital display cut into the shroud above the doors have a onehour alarm delay after defrost. If the case is in defrost, the electronic display will read DEF. Common Things to Check DEFROST AND ALARMS 1. Check the circuit breakers for the cases.

Tripped circuit breakers will cut off the power to the cases and to the alarms. Do not turn off case refrigeration overnight when closing the store. 2. Reachin door low temp cases have a onehour defrost. Check the following before you enter a service request. Determine when the defrost cycle started typically at 800 AM and 800 PM for two defrosts and either 400 AM or 800 AM for one defrost. Please wait one hour and double check case status before calling for service. The fans turn off during defrost and for a few minutes after defrost. Has the case just been stocked Warm product will take 24 hours to cool down. Is the case heavily shopped Frequent door opening will warm the case. [http://3t-t.com/User\\_File/UpFile/20200828070303\\_Ym9zY2gta2d2LTl4MjltbWFudWFs.xml](http://3t-t.com/User_File/UpFile/20200828070303_Ym9zY2gta2d2LTl4MjltbWFudWFs.xml)

Do not block return air grills at the bottom of the low temp case. 3. Reachin door medium temp cases also have a defrost time. Medium temp fans run while in defrost and lights remain on. Typically medium temp cases defrost at 800 AM and 800 PM for two defrosts and 400 AM, 200 PM, and 800 PM for three defrosts. Your settings are saved once this is done. IMPORTANT NOTE At any time if you stop operating the Carel and do not perform step 7, the Carel will return to normal operations and will NOT save your settings. Make sure you keep the Carel programming state active if you have changed settings. If you do not, you will lose all your settings and must start over. Repeat these steps until you have changed all parameters. Do not forget to confirm parameters after setting them. In the event of a problem, an alarm will sound a constant beeping noise and the display will flash an error code. Doing so will silence the alarm for 60 minutes. 2. Identify the alarm code displayed on the screen. Display will alternate between HI and Temperature when HI temp alarm is active. In the event of a high temperature alarm HI, there is a chance that there is a simple fix for the problem a. Verify that a door is not accidentally held open. Sometimes products will fall off the shelves and prevent a door from fully closing. b. Confirm that the case was not recently stocked with product. Holding one of the doors open for an extended period of time as is the case when stocking will raise the internal temperature and possibly set off the alarm. c. Determine whether a defrost cycle has recently occurred. Following the defrost period, the case temperature may be warmer than usual. d. Make sure proper airflow is not compromised by debris covering the balloon guard located at the front of each condensing unit on the top of each case behind the shroud. You will need to use a step ladder to check this. If possible, remove the item or debris blocking the balloon guard.

If you are unable to easily remove the item or debris, call your service provider. ZERO ZONE, INC ZEROZONE.COM 2018 Zero Zone, Inc. All Rights Reserved.
