I saw your video on YOUTUBE on ways to check whether or not it's a Tcom board or Main board, OR if the LED back light inverter board is bad or Back Light driver board. PS I shot a short video of the start up I just described. Have 5v standby. Changed main board no different. Changed power board no different. What can I check now to find the problem? What is the fault and what should I do. Thank you. Answer questions, earn points and help others.
