Although this series is reliable you may encounter one of the HF Trip codes listed below. These codes are a result of an internal error in the drive. Most often these trip codes can be resolved by powering down and allowing the drive sit for 5 minutes before powering up again. If for some reason the code cannot complete its task within the allotted time, it will trip HF70, HF71, or HF72. If this internal serial communication link fails, then the drive will trip HF73. If this voltage is different than the expected value, the drive will trip HF83. If it detects a problem, it will trip one of the 6 codes above HF88, HF90, HF91, HF92, HF96, or HF98. The I have replace with a new one but am still having the same error what could be the reason We are a Data center and have over 100 of these drives in our Liebert fan coil units. The Basics Routine Maintenance. There are a couple simple things to keep an eye on in order to keep your spa optimal for regular use. First off, the most important thing is to use your basic senses. Does your water look clear. Does it smell funny. Does the water feel clean. If you notice anything out of the ordinary about your water, you may need to stay on top of your routine maintenance for your spa. If you notice any leaves or large debris in your water, use a skimmer to scoop up anything you can see. If you notice any smells or scale floating in the water, continue in the article to find out how to remedy these issues. A good thing to regularly check is water chemistry. This is one of the most important things to keep track of when maintaining your spa. A couple test strips or pH test kit are a must have to make sure that your spa water is healthy. The ideal pH balance of your spa should be hovering around the 7.2-7.8 range. Any lower and your water is too acidic. It is important to regularly check pH because any imbalance can hinder the sanitizing agents and promote bacterial growth or cause cloudy or scale buildup in the water. The chemicals needed are pretty straightforward. Quickspaparts.com offers all the chemical test equipment you need! Chlorine Test Strips. Bromine Test Strips. Filter Cleaning Once every two weeks. Once your pH balances are in check, but you are still noticing issues with your water flow and filter efficiency, it may be time to take a look at your filter.

A good rule of thumb is to remove and clean your filter biweekly to ensure minimal blockages and maximize the life of your filter. A simple cleaning can be done with a soft brush and hose to dig out any large particles and clear the filter for better flow. A deep filter clean is great to pair with a routine water replacement for your spa. Quarterly, you should drain and refill the water in your hot tub. While you do this it is a good idea to do a thorough cleaning of your filter. Instead of just rinsing the filter out with water, we recommend soaking the filter overnight in cleaning agents to maximize filter health. Always be sure to do a final water rinse and dry of the filter before reinstallation. Replacement Annually. With regular spa use, it is recommended to do a full filter replacement annually. After regular cleaning, the filter media begins to break down over time. Annually a full replacement is recommended to ensure a long life for all other parts of the spa. Nothing can substitute a brand new filter, and it will feel as if your spa has been completely revived. The water will be cleaner and will flow better overall. Buy a new filter at [quickspaparts.com](http://quickspaparts.com) today. This allowed for an interior featuring an extra wide center console in the front and three bucket seats in the second row.It featured an upright windshield and squaredoff sides.

Its stepped roof was disguised by the roof rack; a design similar to the GMC Envoy XL and Chevrolet

TrailBlazer EXT. This allowed the second and third row seats to be mounted higher than the first row seats. Some optional features included automatic wipers, a 276 watt Boston Acoustics premium sound system, handsfree phone integration, dual zone auto climate control, remote start, a power liftgate, heated first and second row seats, auto dimming mirrors, hill start assist, hill descent control, and adjustable pedals. Smartbeam headlights were also available as well as HID headlights. The Commander also had an optional entertainment package which included a DVD player, 9 in 229 mm TV, and backup camera. In Europe and certain other markets like Chile, South Africa, and South Korea, the Commander offered a V6 Diesel engine. QuadraTrac I was available on models equipped with the 3.7 L engine; it is a fulltime system that requires no driver input. QuadraTrac II was available on models equipped with a V8 engine; it is a fulltime system as well but adds a low range as well as a neutral position for towing. QuadraDrive II expands on QuadraTrac II by adding electronic limited slip differentials to the front and rear axles. When equipped with QuadraDrive II, skid plates for the fuel tank, front suspension, and transfer case were also added. Chrysler announced that the 2011 Dodge Durango would be its successor; which is produced alongside its platform mate the 2011 Jeep Grand Cherokee at Jefferson North Assembly in Detroit, Michigan. While similar in size to the original Commander, the Grand Commander will offer four cylinder power. Based on the Ram 1500 platform, the all new vehicle will be built in Warren, Michigan and will share production with a possible Dodge Ramcharger or Dodge Town Wagon successor as well.
