Learn More There's one very good reason why these are supplied as they are designed to be extremely easy to set up so reducing the likelihood of a support call. These chunky units score over a number of other Powerline solutions as they incorporate a pass through socket so you can plug other devices or even power strips into them.One of the units is designated as an Access Point AP and this effectively acts as a bridge between other PowerGrid adapters and your main network and Internet connection. You simply plug the first one in and connect it directly to your Internet router or modem where it defaults to accepting an IP address from a DHCP server. Only one AP is allowed to exist on the Powerline network and all other adapters are configured as EPs End Points. The next adapter is then plugged in next to your PC or other network device. Timing is everything now as on the AP you reset the configuration again and whilst its AP light is flashing you reset the second adapter. Three status LEDs are provided showing whether the adapter is an AP, the status and activity for the Ethernet connection and the speed of the connection. To save power you can press the standby button and the unit will switch itself off. As with initial installation, there's nothing you need do here as all key generation and exchanges are handled automatically during the setup phase. If you do add further adapters, you go through the same process of resetting the AP and

following with this procedure on each new unit. The passwordprotected interface isn't particularly exciting and opens with a basic status rundown on transmit and receive throughput plus details of the network ID.http://www.twil.com.au/userfiles/9050-manual.xml

The encryption type and negotiated keys can be viewed and you can see whether the adapter is functioning as an AP or EP. Don't worry about the notch settings as you're highly unlikely to need to change these and the manual doesn't provide any enlightenment anyway. The encryption schemes, key length and key can also be modified but we would strongly recommend leaving the adapters to sort these out automatically. To secure access you can change the default administrative password and also reset the adapter back to factory defaults. With a two adapter pack costing as little as 70 they are very good value and also offer strong encryption to protect against eavesdroppers but performance is a big disappointment. We use industry standard tests in order to compare features properly. We'll always tell you what we find. We never, ever accept money to review a product. generally download a digital version of your routers.28 January 2015 Resetting ComTrend Powerline Adapters. Replicated from my old blog since it was so popular. Adapter 1 Connectivity Single Ethernet RJ45 Port Brand Comtrend.Subscribers to BT's Vision IPTV service will no doubt be quite familiar with Comtrend's PowerGrid 902 Powerline adapters as you get a pair of these.Comtrend Powerline 9020 Ethernet Adapters Reset Configuration 2 The Comtrend PG9172 G.hn Powerline Adapter has a crazy name Duration.NOTE A minimum of two G.hn Powerline Adapters are required to create a proper connection. I'd already used 2 of the powerline adapters to route the internet connection from the room where the BT line comes in to a second router in the lounge, but then set up a 3rd powerline adapter on the other side of the room so I now had wired access where I need it, and without wires all over the place. You get 1 red light on Status once reset is finished. RayEn reported you get 6 flashes. You should then get a solid green AP light. Plug one into the power strip next to the master adapter. Do a hard reset ON THE SLAVE ADAPTER ONLY. follow step 1 above. On the slave and the master at the same time hold the Config Reset Button down for 5 secs until AP light starts flashing on both then release. The slave will sync with the master and the red status light on both will turn green. Now unplug the slave adapter and put to one side. Repeat this slave setup step for each adapter. Plug master into router. Source is here. Something went wrong. View cart for details.User Agreement, Privacy, Cookies and AdChoice Norton Secured powered by Verisign. You should upgrade or use an alternative browser. I have tried the factory reset sequence several times and nothing works. I have IP connectivity and can get in via the web interface and all seems OK. However even setting the encryption keys and codes manually doesnt work Anyone seen this before or got any ideas I bought them from my impoverished daughter whose boyfriend stopped using them. They worked fine for 24 hours and then when I needed to move the place they were plugged in they stopped working. I suspect daughters dont give money back guantees Anyone got a single one of these they want to sell. Or at a pinch a pair In others they work fine. What T72 meant was that you need to test them in a regular double switched wall socket. In others they work fine. What T72 meant was that you need to test them in a regular double switched wall socket.I also took them to another house and tried them there. Still not talking to each other. Oh well. It is quite possible the adapters are faulty but just in case its the process you might try these steps. Hope they help Paul PS I found that I couldnt include an attachment using Firefox, so had to use IE. It is quite possible the adapters are faulty but just in case its the process you might try these steps.The EP and AP never sync so both end up as AP. Doesnt matter which way round things are or the precise order I do things in. I have given up and will be bidding on ebay real soon. The EP and AP never sync so both end up as AP. I have given up and will be bidding on ebay real soon.He can hear a hear frequency whistle from our Bose SoundDock even without the iPod plugged in. I saw your post elsewhere on this. I havent experimented though so I dont know if the problem will go away if I move the unit The cure was just to move the SoundDock away from the power Socket in the Kitchen. 3ft separation is all you need for the problem to go away. The comtrend units are not plugged in anywhere near the SoundDock.

http://atmos-service.com/images/candy-washing-machine-user-manuals.pdf

The noise we here would appear to being carried over the main wring. The comtrend units themselves do not seem to be making much noise. Dont let power, PC or speaker cables cross paths not easy I realise All went smoothly. Ive just bought a pair of Comtrend adapters, connected one to HH downstairs, one to XP old desktop, upstairs. All lights etc seem to be as they should be AP one is connected to HH, one upstairs has a red and a pretty steady green light when plugged in to computer.Ive just bought a pair of Comtrend adapters, connected one to HH downstairs, one to XP

old desktop, upstairs. All lights etc seem to be as they should be AP one is connected to HH, one upstairs has a red and a pretty steady green light when plugged in to computer.Is the AP plugged into the HH. If not it should be. If you plug the two units into adjacent sockets in a double WALL outlet NOT a power strip do you get two green LEDS on both units. When the two units are separated which LED is red. Are you using a power strip or filtered power strip Dont! Is the AP plugged into the HH. Are you using a power strip or filtered power strip Dont!I have tried to see via HH setup whether the comtrends are visible, but in the devices section I can only see the two main computers new desktop, ethernetted to HH, and laptop, wireless connection. Ive no idea what that is, but it wont be adapter will it. Im going to get them both now and plug in to ground floor sockets, in case wierd electricity in this house! I have tried to see via HH setup whether the comtrends are visible, but in the devices section I can only see the two main computers new desktop, ethernetted to HH, and laptop, wireless connection. Im going to get them both now and plug in to ground floor sockets, in case wierd electricity in this house!Do you think this means I do have wierd electricity i.e.two seperate circuits, one upstairrs one down Do you think this means I do have wierd electricity i.e.

two seperate circuits, one upstairrs one downIt all depends on how the LEDS behave when the units are plugged in sidebyside. Read either of the manuals they are well laid out and very clear with lots of pictures to explain what it all means. Dont start making adjustments in the web interface until have the things working. The default setup works OK and is secure enough in most circumstances. Join the AVForums team live on Sundays at 7pm. By continuing to use the forum you conform your acceptance of these. Many thanks, Norman. He's been smitten ever since, and having decided to forge a career in technology journalism, he's now been testing, reviewing and dispensing balanced and objective advice for over 20 years. If it's been released in that time and has some kind of processor, he's probably tested it.Despite having written about enough PCs, laptops, tablets, routers, smartphones, headphones, graphics cards, monitors, printers, scanners, cameras, cars and smart tech to fill an Amazon warehouse, his enthusiasm for all things shiny has never waned. Read more October 7, 2009 78 Price when reviewed Powerline networking adapters are the way to go if you don't want to clutter your house with CAT5 cable, but still want the speed and reliability of wired networking. And this Comtrend pair is among the more practical devices we've reviewed. Although bulkier than most, the body of each adapter extends up from the socket rather than down, which means they'll fit low, skirtingboardmounted sockets. Plus, each adapter has a passthrough mains socket, so no more wasted sockets. Speeds weren't as impressive, however. And this, alas, means they can't be recommended.
