Instead, our system considers things like how recent a review is and if the reviewer bought the item on Amazon. It also analyzes reviews to verify trustworthiness. The code or John Marshall's Conservation Manual was designed as a prescriptive colonial text, setting down stringent rules for the practice of monument preservation in a colony, and thus constituted a text of authority. Yet, it was also the product of the kind of tension that was implicit in the operation of colonial state power in India, which resulted from the need to reconcile ideas produced in the metropolitan culture of contemporary Britain with local pressures on the ground in the various regions and localities of India. The intentionality of the text that thus emerged must therefore be understood in the context of the multiple audiences that it sought at the same time to address. By examining the context in which the Conservation Manual was conceived and finally produced, that is, from the early years of the twentieth century until its appearance in 1923, this paper hopes to contribute to a clearer understanding of the problems of the preservation of monuments, especially religious structures, in colonial India during two decades of the most intense legislation and regulation of ancient monuments. Close this message to accept cookies or find out how to manage your cookie settings. This list is generated based on data provided by Nations and Nationalism. Vol. 24. Issue. 1, Vol. 77. Issue. 4, The project of conserving the Hindu temple was beset by disagreements. The claims of the colonial state and local Hindu devotees were separated by different precepts about religiosity and alternate orders of aesthetics, time, and history. However, it is clear that there were also confluences legislative authority could masquerade as custody of the antiquarian and, in practice, the secular veneration of material antiquity blurred with Hindu divinity. This paper combines an exploration of the principles of archaeological conservation, as they were formed in the European bourgeois imagination, and then traces their transfer, though imperial administration, to case studies of specific temples. Of particular interest is the deployment of the Act by local administrations and the counterchallenges, appropriations, and manipulations of the same legislation.

How were the aesthetic codes of conservation—and the legislation that sought to order and enforce their introduction—compromised by religious claims and practices I would like to acknowledge the great assistance given by David Smith of the Department of Religious Studies, Lancaster University, in the development of this work. I would like to acknowledge the great assistance given by David Smith of the Department of Religious Studies, Lancaster University, in the development of this work. Sawdust Online News Moves Events Updates Regulatory Affairs Sawdust Originals Spotlight Industry Trends Do You Know. ASI, presently under the Ministry of Culture was established in 1861 to initiate legal provision to protect the historical structures all over India. ASI is one of the most neglected government agencies in India suffering from perpetual funds shortage and under staffing. As a result, many of its projects are dragged on for years as work in progress. ASI also lacked innovativeness in its approach and found to be inflexible on many occasions. Moreover, Also, ASI has been following the Manual of Archaeological Survey of India, published in 1984, and Archaeological Works Code which were more than 30 years old. Though, some of the policies and guidelines inked nearly a century ago are relevant even today, there is an urgent need to update some of the basic conservation policies keeping in mind the rise in pollution, rapid encroachment and growing urbanization. Guidelines drafted by John Marshall emphasized insitu conservation, that is, preserving the monument the way it is. In 2013, ASI had prepared a new conservation policy drafted keeping in view the new developments and technologies for monument preservation. The draft conservation policy is awaiting approval of the culture ministry. However, ASI cannot be solely responsible for the sorry state of affairs of our heritage conservation.

All these years, ASI had been sticking to the original principle of preserving monuments in situ. It should be noted that whenever ASI had attempted at restoration by rebuilding missing or damaged portions of a monument, it had created lot of controversies. It should be noted that preservation and conservation of ancient monuments is a multidisciplinary activity which requires support of researchers, technicians, architects and historians. Ideally, the principles guiding the preservation and restoration of ancient buildings should be agreed and be laid down on an international basis, with each country being responsible for applying the plan within the framework of its own culture and traditions. However, it appears that ASI and its parent Ministry are giving least significance to policy formulation, setting standards, monitoring and documentation of conservation works which will endanger monuments in the longer run. Marshall modernised the approach to archaeology on that continent, introducing a programme of cataloguing and conservation of ancient monuments and artefacts. In 1913, he began the excavations at Taxila, which lasted for twenty years. In 1918, he laid the foundation stone for the Taxila Museum, which today hosts many artifacts and one of Marshall's few portraits. He then moved on to other sites, including the Buddhist centres of Sanchi and Sarnath. Following the lead of his predecessor Alexander Cunningham, Marshall, in 1920, initiated a dig at Harappa with Daya Ram Sahni as director. In 1922, work began at MohenjoDaro. The results of these efforts, which revealed a seeming ancient culture with its own writing system, were published in the Illustrated London News on 20 September 1924. Scholars linked the artifacts with the ancient civilisation of Sumer in Mesopotamia.^{CS1} maint extra text authors list link Cambridge Cambridge University Press. London The India Society. However, with the consolidation of colonial rule during the 19th century, European ideology and systems of conservation supplanted indigenous practices. Even the imported ideology established deep roots in Indian soil. In 1862, The Archaeological Survey of India ASI was established under Sir Alexander Cunningham. In 1904, The Ancient Monuments Preservation Act empowered the ASI to protect monuments of national importance, and Sir John Marshall became its first Director General. In his long tenure of 24 years Marshall instilled a strong professional culture in the institution and compiled the Manual for Conservation to guide its practice. After Independence, in 1958, The Ancient Monuments and Archaeological Sites and Remains Act was passed to replace the colonial Act, and extend protection to monuments of national importance.
